SCIENTIFIC REPORT IMIBIC 2022

DIRECTOR'S FOREWORD FOR 2022 SCIENTIFIC REPORT

Pablo Pérez Martínez

Scientific Director

María del Mar Malagón Poyato

Deputy Scientific Director

This report provides a summary of IMIBIC's activity during 2022, in which this activity was gradually recovering after the COVID epidemic. The pandemic has served us to set more ambitious goals for the future, designing an itinerary to advance in smart and sustainable ways, and putting us in a position as an international benchmark, at a higher level of excellence, on par with the large research institutions which lead the field in this, the most pioneering branch of science. In order to achieve this goal, we are currently developing the objectives that were proposed in the Strategic Plan 2021-2025 as well as posing new challenges for the near future.

One of IMIBIC's main assets is its human capital. In 2022, a significant number of predoctoral and postdoctoral researchers as well as technical personnel joined our research groups and platforms, thus reinforcing our potential for growth and, at the same time, giving these talented young people the opportunity to develop their professional careers. In this context, we would like to highlight the incorporation of 80 persons, recent graduates, who have joined the different groups of the Institute, within the Investigo Program, to be trained for two years with special emphasis on clinical research.

During 2022, we intensified our innovation activity. Our Technological Innovation unit is one of the main strengths of the Institute and, thanks to recent support from the Carlos III Health Institute, we now have the structural resources to continue growing. The scientific management fully supports this commitment, since we consider that innovation is a critical feature of a biomedical research institute. The growing activity of the Innovation Unit, as well as of all the rest of IMIBIC's technology units, some of which have been also strengthened with the latest equipments, guarantees IMIBIC's position at the forefront of translational research.

The management's proposal for the future, therefore, is aimed at promoting growth, based on the principles of excellence and translation to the healthcare environment. This includes a commitment to the promotion of young researchers, aiming to foster talent and creativity so that the Institute continues to evolve and attract researchers of excellence. This will help consolidate IMIBIC as an international reference centre. In addition, we will continue to focus our attention on attracting international funds, prioritizing European and NIH projects, and encouraging innovation and transfer as tools to reduce the gap between research and transfer both to clinical practice and to companies in the health sector. There are many steps and goals yet to be fulfilled, there are many challenges and difficulties to be overcome, but the spirit of the IMIBIC has humbly shown the path to blend basic and clinical research, to combine competitiveness with cooperation, to support profound changes while maintaining coherent and solid project goals, and to attain excellence and quality in research.

Finally, in order to align ourselves with the new requirements of the Carlos III Health Institute, we are working on aspects related to the 6 principles of Responsible Research and Innovation: ethics, gender equality, responsible governance, open access, science education and public engagement.

Over the next pages, you will have the opportunity to see the results of this continued growth and the consolidation of our efforts to progress in the field of biomedical research, but most of all, you will witness the robust willingness to continue rising altogether in this common and enduring pathway.

2

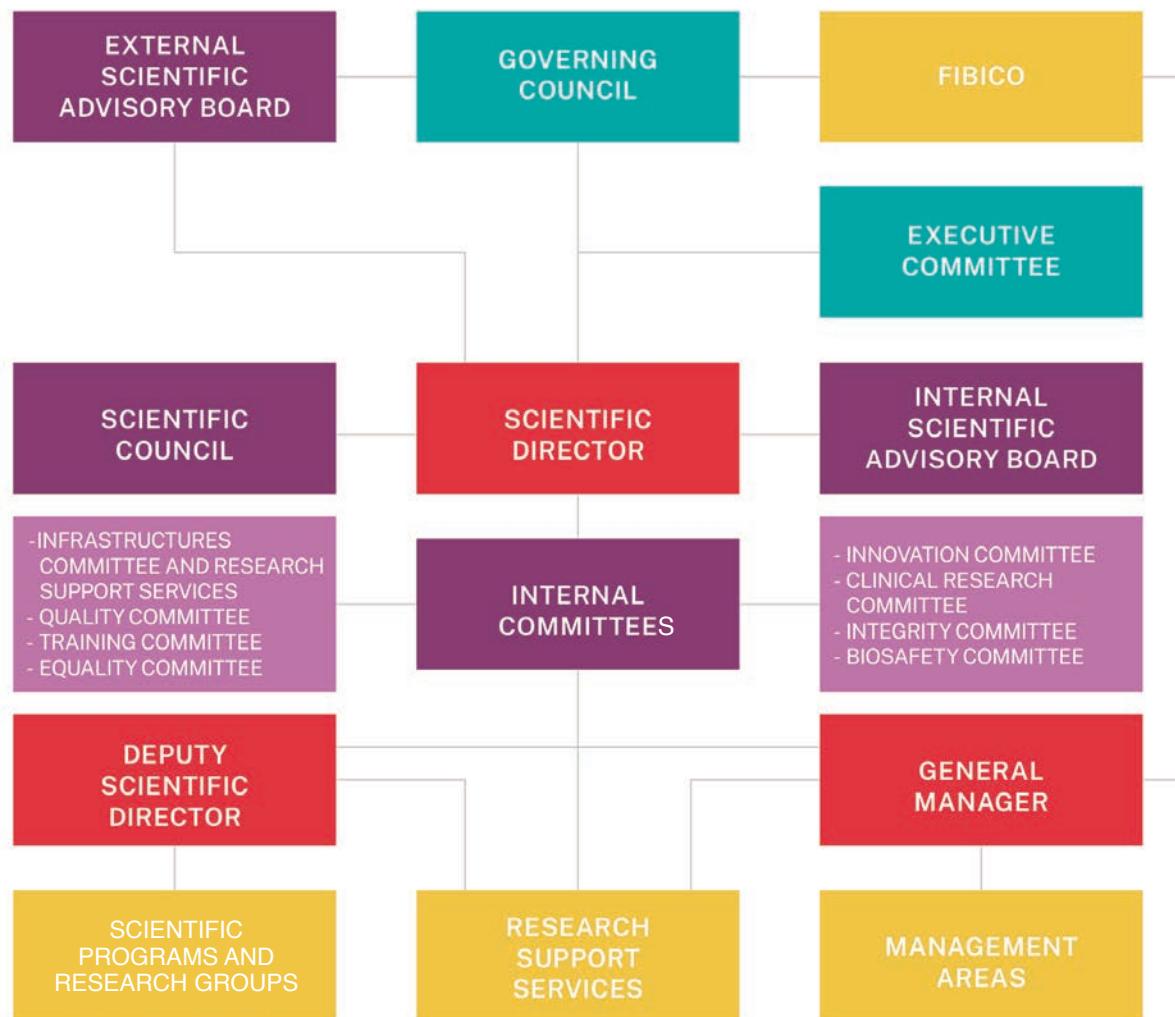

SCIENTIFIC REPORT IMIBIC 2022

SCIENTIFIC REPORT IMIBIC 2022

GOVERNANCE AND STRUCTURE

2.1 ORGANIZATION CHART

The governing and representative bodies of IMIBIC are set out below:

A. 1. COLLEGiate BODIES

The collegiate bodies that make up the IMIBIC are the Governing Council, the Executive Committee, the External Scientific Advisory Board, the Internal Scientific Advisory Board and the Scientific Council. Each body is composed of a number of specialists and has its own competencies.

» GOVERNING COUNCIL

The Governing Council is the main governing body of IMIBIC. The Governing Council is composed of the following members:

- Two representatives from the Regional Ministry of Health and Consumer Affairs of the Regional Government of Andalusia

Dr. Isaac Túnez Fiñana

Secretary General of Public Health and R&D+i in Health of the Regional Ministry of Health and Consumer Affairs.

Dr. Valle García Sánchez

Managing Director of the Reina Sofia University Hospital and President of FIBICO.

- Two representatives from the Regional Ministry of University Research and Innovation.

Mr. Librado Carrasco Otero

Director General of Research Planning.

Mr. José Francisco Viso Sánchez

Territorial Delegate for Educational Development and University Research and Innovation.

- Two representatives from the University of Córdoba

Dr. Mª José Polo Gómez

Vice-Rector for Science Policy.

Dr. Lourdes Arce Jiménez

Vice-Rector for Innovation and Transfer.

- One representative from the Andalusian Public Foundation for Progress and Health (FPS)

Mr. Gonzalo Balbontín Casillas

Managing Director

- Scientific Director, IMIBIC

Dr. Pablo Pérez Martínez

- General Manager, IMIBIC

Mr. Álvaro Granados del Río

» EXECUTIVE COMMITTEE

On July 27, 2015, the Governing Council adopted the agreement to create an Executive Committee to facilitate efficient decision-making. The Executive Committee is made up of one member from each of the institutions that constitute the Governing Council, as set out in the collaboration agreement between the Regional Ministry of Health and Families, the Regional Ministry of Economic Transformation, Knowledge, Industry and Universities, and the University of Córdoba. The Scientific Director and General Manager participate in an advisory capacity, but without voting rights.

- One representative from the Regional Ministry of Health and Consumer Affairs of the Regional Government of Andalusia

Dr. Valle García Sánchez

Managing Director of the Reina Sofia University Hospital and President of FIBICO

- One representative from the Regional Ministry of University Research and Innovation

Mr. D. José Francisco Viso Sánchez

Territorial Delegate for Educational Development and University Research and Innovation.

- One representative from the University of Córdoba

Dr. Rafael Solana Lara

Vice-Rector for Health and Welfare of the University Community.

- One representative from the Andalusian Public Foundation for Progress and Health (FPS)

Mr. Gonzalo Balbontín Casillas

Managing Director

- Scientific Director, IMIBIC

Dr. Pablo Pérez Martínez

- General Manager, IMIBIC

Mr. Álvaro Granados del Río

» EXTERNAL SCIENTIFIC ADVISORY BOARD

The External Scientific Advisory Board is appointed by the Governing Board and its mission is to assist the Governing Council, the Scientific Council and the Scientific Director in the performance of their duties. It acts as an advisory body to the Scientific Management, although its opinions and recommendations are not legally binding. It was created on July 9, 2009, under the name of the External Advisory Board, and ratified by the Governing Council on December 21, 2009. The External Scientific Advisory Board is made up of a minimum of three and a maximum of ten highly qualified professionals with recognized experience in their field of research. Members of the External Scientific Advisory Board must carry out their professional activity outside the Autonomous Community of Andalusia, and at least one of them must not be resident in Spain. Members must be able to individually demonstrate that they have no conflicts of interest. The members of the board are:

- **Dr. Lina Badimon Maestro**

Director of the Cardiovascular Research Center (CSIC-ICCC) at the Hospital de la Santa Creu i Sant Pau, Autonomous University of Barcelona (UAB), Institute for Biomedical Research (IIB-SPau), (Barcelona). President of the CCE.

- **Dr. Carlos Diéguez González**

Scientific Director of CIBER Obesity and Nutrition (ISCIII) and Director of the Centre for Research in Molecular Medicine, University of Santiago (CIMUS). (Santiago de Compostela).

- **Dr. José María Ordovás Muñoz**

Senior Scientist, Director of the Nutrition and Genomics Laboratory and Chairman of the Functional Genomics Core Facility of the Jean Mayer USDA Human Nutrition Research Center on Aging, Tufts University (Boston, USA). Scientific Director of the Madrid Institute for Advanced Studies (IMDEA) (Madrid).

- **Dr. Francisco Sánchez Madrid**

Professor of Immunology at the Autonomous University of Madrid and Scientific Director of the Health Research Institute of the Hospital de La Princesa (Madrid).

- **Dr. Pura Muñoz Cánores**

ICREA Research Professor and Professor of Cell Biology of the Department of Experimental and Health Sciences, University Pompeu Fabra. Leader of the Tissue Regeneration group at the National Centre for Cardiovascular Research (CNIC) in Madrid.

» INTERNAL SCIENTIFIC ADVISORY BOARD

The Internal Scientific Advisory Board is an advisory body to the Scientific Director. It is composed of the Scientific Director and Researchers (including researchers in training) and represents all priority scientific areas of the Institute. The Internal Scientific Advisory Board consists of the following members (a maximum of 18). It includes those responsible for Quality, Innovation and Training. It was established on November 25, 2019 (and was previously known as the Permanent Committee of the Scientific Council). The members of the board are as follows:

• Dr. Pablo Pérez Martínez	Scientific Director
• Mr. Álvaro Granados del Río	General Manager
• Dr. Mª del Mar Malagón Poyato	Deputy Scientific Director
• Dr. Juan de la Haba Rodríguez	Coordinator of Clinical Research
• Dr. Fernando Sarramea Crespo	Coordinator of Active Ageing and Frailty Program
• Dr. Manuel Tena Sempere	Coordinator of the Nutrition, Endocrine and Metabolic Diseases Program
• Dr. Antonio Rivero Román	Coordinator of the Infectious & Immunological Diseases and Organ Transplantation Program
• Dr. Marco A. Calzado Canale	Coordinator of the Cancer (Oncology and Oncohematology) Program
• Ds. Marina Álvarez Benito	Coordinator of the Chronic and Inflammatory Diseases Program
• Dr. Raúl Luque Huertas	Designated representative of the Training Committee
• Dr. Eduardo Muñoz Blanco	Designated representative of the Innovation Committee
• Dr. Miguel González Andrades	Emerging Researcher
• Dr. Elena Yubero Serrano	Emerging Researcher
• Dr. Nuria Barba	Emerging Researcher
• Ms. Laura Martín Piedra	Predoctoral Researcher
• Mr. Juan Manuel Jiménez Vacas	Predoctoral Researcher

» SCIENTIFIC COUNCIL

The Scientific Council acts as an advisory body to the Scientific Director. It is composed of the Scientific Director, the Deputy Scientific Director, Principal Investigators (PI), Emerging Researchers (ER), one representative from the Reina Sofia University Hospital (RSUH) Board of Directors, one representative from Research Support Services, one representative of the management staff and the General Manager of the IMIBIC. It was established on July 9, 2009.

A. 2. OUTGOING MEMBERS OF THE GOVERNING BODIES

- **Mr. Ángel Herrador Leiva**
Delegate for Employment, Training, Self-Employment, Economics, Knowledge, Business and Universities.
- **Ms. M^a Teresa Serrano Gotarredona**
General Manager of Research and Knowledge Transfer.
- **Mr. Enrique Quesada Moraga**
Vice-Rector for Research and Territorial Development.
- **Mr. Antonio J. Cubero Atienza**
Vice-Rector for Coordination, Infrastructure and Sustainability.
- **Ms. Luisa M. Rancaño Martín**
Managing Director.

B. INDIVIDUAL MEMBERS

The Management Team is responsible for ensuring the effectiveness of performance in order to increase the quality and impact of IMIBIC's research activity.

» SCIENTIFIC DIRECTOR

Dr. Pablo Pérez Martínez

Full Professor of Medicine at the University of Córdoba and specialist in Internal Medicine, Reina Sofia University Hospital, Córdoba.

» DEPUTY SCIENTIFIC DIRECTOR

Dr. María del Mar Malagón Poyato

Full Professor of Cell Biology at the University of Córdoba and Principal Investigator of the GC11 research group.

» CLINICAL RESEARCH PROGRAM COORDINATOR

Dr. Juan de la Haba Rodríguez

Specialist in Medical Oncology, Reina Sofia University Hospital, and Associate Professor at the University of Córdoba.

» GENERAL MANAGER

Mr. Álvaro Granados del Río

BSc in Business Administration and Management. Advanced Program for Management of Health.

C. 1. INTERNAL COMMITTEES

» QUALITY COMMITTEE

This Committee ensures the maintenance of quality and ethical codes in all research activities and among researchers, in accordance with Quality Plan guidelines.

- | | |
|--|--|
| • Dr. M^a del Mar Malagón Poyato | Deputy Scientific Director |
| • Ms. Marisa Escabias Parejo | Quality Specialist |
| • Mr. Álvaro Granados del Río | General Manager |
| • Dr. M^a Antonia Álvarez de Lara Sánchez | Head of Quality and Clinical Documentation, RSUH |
| • Dr. José Manuel Aranda Lara | Technical Advisor to the Territorial Delegate of the Andalusian Regional Ministry of Health and Families |
| • Dr. M^a Teresa Roldán Arjona | Principal Investigator GC22 |
| • Dr. Luís Martínez Martínez | Principal Investigator GC24 |
| • Dr. Rafael Solana Lara | Principal Investigator GC01 |
| • Dr. Juan Ruano Ruiz | Principal Investigator GC29 |
| • Dr. Ana León Acuña | Postdoctoral Researcher GC09 |

» TRAINING COMMITTEE

This committee is responsible for carrying out the Training Plan, in particular, the Master's and Doctoral Programmes in Biomedical Research.

- | | |
|---|------------------------------|
| • Dr. Juan Manuel Castellano Rodríguez | Postdoctoral Researcher GC10 |
| • Mr. David Luna Gómez | Training Technician |
| • Ms. Inmaculada Varo Urbano | Training Officer |
| • Mr. Álvaro Granados del Río | General Manager |
| • Dr. Raúl Luque Huertas | Principal Investigator GC27 |
| • Dr. Antonio Pablo Arenas de Larriva | Predoctoral Researcher GC09 |

• Dr. Elisa Roldán Romero	Director of Studies, RSUH
• Dr. Joaquín Toro Santiago	Head of Integrated Training Unit, RSUH
• Dr. Nuria Barbarroja Puerto	Emerging Researcher GC05
• Dr. Juan Solivera Vela	Head of Neurosurgery Service, RSUH
• Dr. Sebastián Ventura Soto	Principal Investigator GC25
• Ms. Alejandra Méndez Natera	Predoctoral Researcher GC03
• Dr. Alejandro Ibáñez Costa	Postdoctoral Researcher GC08
• Ms. Gema García Jurado	Technical Specialist in Cytometry and Microscopy
• Dr. Antonio García Ríos	Emerging Researcher
• Dr. Rafael Pineda Reyes	Postdoctoral Researcher GC10
• Ms. Isabel de Castro Burón	Communications Officer
• Mr. Rafael Blanco Moreno	Teacher of Biology, Ateguá Secondary School, Castro del Río
• Mr. José Carlos Prieto Baena	International Project Manager
• Mr. Juan Luis Parras Pezard	Hospital Pharmacy Data Manager
• Mr. Julio Manuel Martínez Moreno	Postdoctoral Researcher GC13

» EQUALITY NEGOTIATING COMMITTEE

This committee is responsible for the Equality Plan and promotes equal opportunities and equality of treatment between women and men in accordance with the principles of corporate social responsibility and in compliance with current legislation.

• Dr. Mª del Mar Malagón Poyato	Deputy Scientific Director
• Mr. David Luna Gómez	Quality Technician and Secretary of Equality Negotiating Committee
• Ms. Miriam Cruzado Caballero	Head of the Research Management Unit
• Mr. Francisco Javier López Ruiz	Head of Economic and Resource Management
• Mr. Florencio Muñoz Encinas	Technician: Economic and Resource Management
• Ms. Silvia Miranda Castellano	Technician: Economic and Resource Management
• Ms. Marisa Escabias Parejo	Quality Specialist and Staff Representative
• Ms. Estefanía Azcona Corrales	Management Control Technician and Staff Representative
• Dr. Julio Manuel Martínez Moreno	Post-doctoral Researcher GC13 and Staff Representative
• Mr. Daniel José Campón Montilla	Laboratory Technician and Staff Representative
• Dr. Antonio Romero Ruiz	Emerging Researcher GE09 and External Advisor to IMIBIC
• Dr. Alejandra Pera Rojas	Emerging Researcher GC01 and External Advisor to IMIBIC
• Ms. Higinia Romero Crespo	External Advisor.

» INFRASTRUCTURES AND RESEARCH SUPPORT SERVICES COMMITTEE

This Committee is responsible for supervising existing IMIBIC infrastructures and implementing the Infrastructure Plan.

• Dr. Mª del Mar Malagón Poyato	Deputy Scientific Director
• Mr. Francisco Javier López Ruiz	Head of Financial and Human Resources Management
• Mr. Álvaro Granados del Río	General Manager
• Dr. Eduardo Chicano Gálvez	Senior Technical Specialist, Research Support Service: Mass Spectrometry and Molecular Imaging Unit
• Dr. Esther Peralbo Santaella	Senior Technical Specialist, Research Support Services: Cytometry and Microscopy
• Ms. Anabel Pozo Salas	Technician, Research Support Services: Animal Experimentation
• Dr. Antonio Rodríguez Ariza	Co-Principal Investigator GC06
• Dr. Rosario López Pedrera	Principal Investigator GC05
• Dr. Victoria Guiote Moreno	Predoctoral Researcher GA10
• Dr. Sara Cantisán Bohórquez	Researcher GC03
• Dr. Juan A. Moreno Gutiérrez	Principal Investigator GE06
• Dr. Juan Roa Rivas	Researcher CG10
• Dr. Feliciano Priego Capote	Principal Investigator GC21
• Dr. Esther Rivero Cortés	Senior Technical Specialist for General Procedures

» CLINICAL RESEARCH COMMITTEE

The Clinical Research Committee implements the IMIBIC Clinical Research Plan.

• Dr. Juan de la Haba Rodríguez	Coordinator of Clinical Research
• Dr. José Carlos Garrido Gracia	Head of UIC Management Area and Secretary of the Committee
• Mr. Álvaro Granados del Río	General Manager
• Dr. Julián de la Torre Cisneros	Principal Investigator GC03
• Dr. Concepción Herrera Arroyo	Principal Investigator GC14
• Dr. Pilar Font Ugalde	Researcher GC05
• Dr. Juan Ruano Ruiz	Principal Investigator GC29
• Dr. Álvaro Arjona Sánchez	Principal Investigator GE09
• Dr. Enrique Gómez Gómez	Researcher GE05
• Dr. Juan Carlos Castillo Domínguez	Researcher GC15
• Dr. Eduardo Agüera Morales	Emerging Researcher GC28

• Dr. Mª José Méndez Vidal	Clinical Researcher GC06
• Dr. Daniel López Ruiz	Researcher GA08
• Dr. Mª Dolores Mesa Rubio	Researcher GC15
• Dr. Esperanza Romero Rodriguez	Researcher GC12
• Dr. Javier Torres Borrego	Coordinator of Pediatric Allergy & Pulmonology Unit
• Mr. Ángel Cañadilla Moyano	External Member

» INNOVATION COMMITTEE

The Innovation Committee is responsible for carrying out the IMIBIC Innovation Plan.

• Dr. Pablo Pérez Martínez	Scientific Director
• Dr. Luis Fernández Formoso	Project Manager
• Dr. Mª del Mar Malagón Poyato	Deputy Scientific Director
• Mr. Álvaro Granados del Río	General Manager
• Dr. Marina Álvarez Benito	Principal Investigator GA08
• Dr. Eduardo Muñoz Blanco	Principal Investigator GC04
• Dr. Francisco Javier Delgado Lista	Co-Principal Investigator GC09
• Dr. Rafaela Ortega Castro	Postdoctoral Researcher GC05
• Dr. Juan Rafael Muñoz Castañeda	Emerging Researcher GC13
• Dr. Juan Solivera Vela	Head of Neurosurgery Service RSUH
• Dr. Manuel David Gahete Ortíz	Principal Investigator GC30
• Dr. Miguel González Andrade	Principal Investigator GE07
• Dr. Antonio Rivero Juárez	Emerging Researcher GC26
• Mr. David Requena Polonio	Technical Specialist, Innovation
• Mr. Francisco Jiménez San Martín	External Member

» SCIENTIFIC PROGRAMS

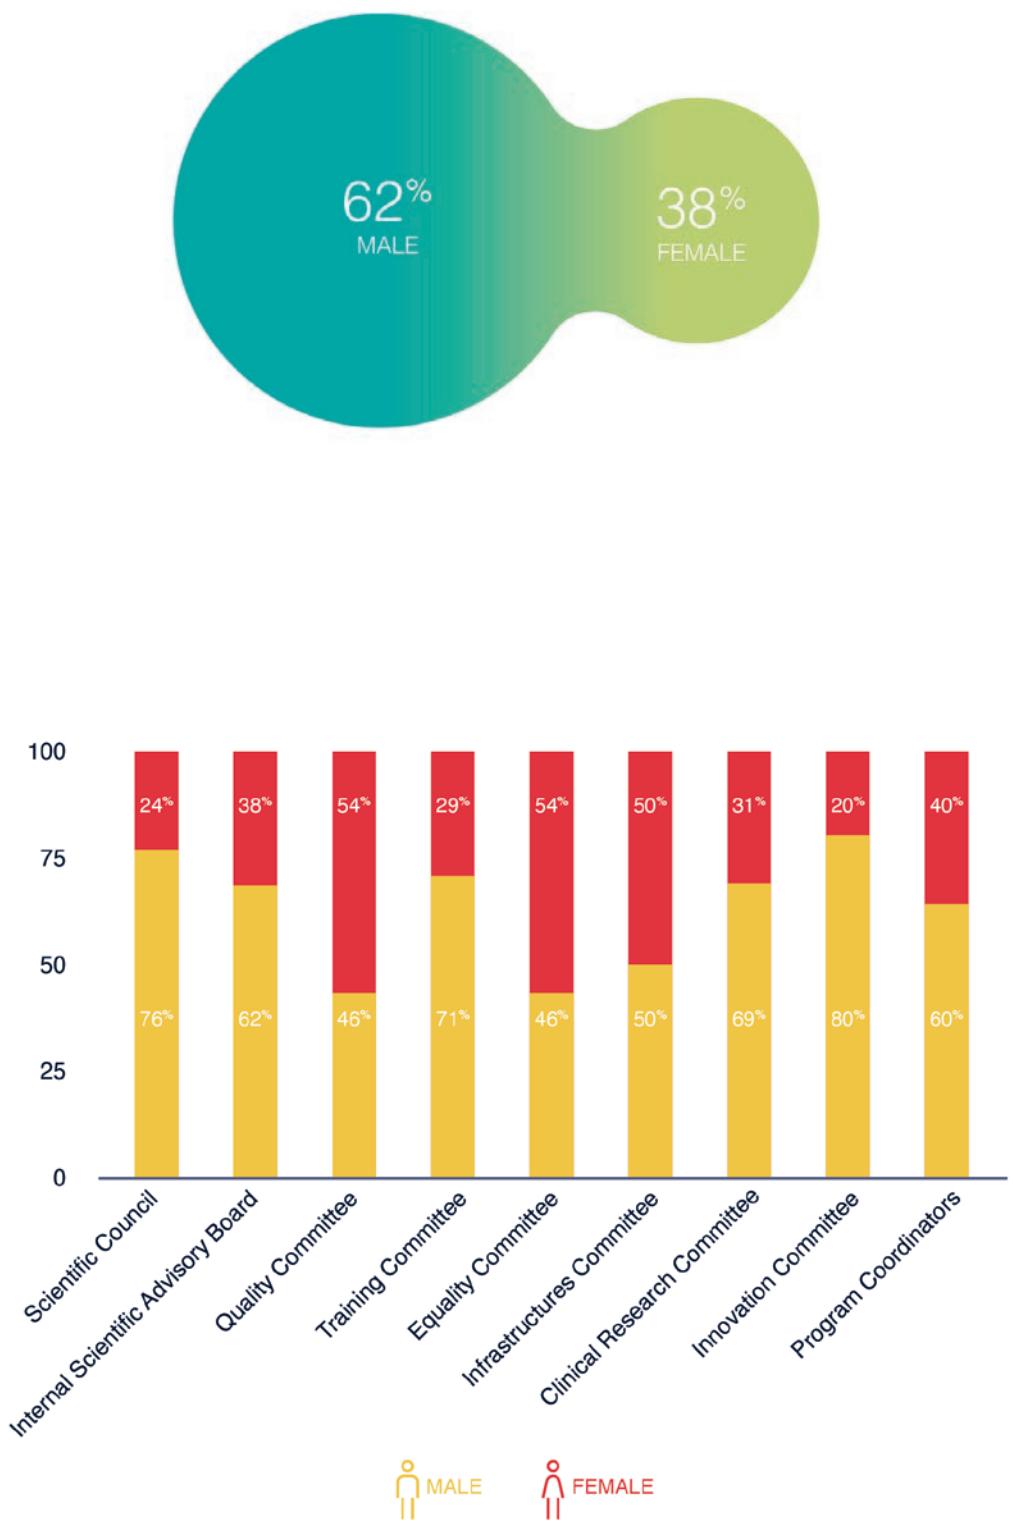

All IMIBIC research groups must be integrated into the scientific programs belonging to the main thematic areas of IMIBIC research being carried out at any given time:

• ACTIVE AGEING AND FRAILTY	Dr. Fernando Sarramea Crespo
• NUTRITION, ENDOCRINE AND METABOLIC DISEASES	Dr. Rafael Solana Lara
• INFECTIOUS AND IMMUNOLOGICAL DISEASES AND ORGAN TRANSPLANTATION	Dr. Manuel Tena Sempere Dr. Elena Yubero Serrano Dr. Antonio Rivero Román Dr. Sara Cantisán Bohórquez
• CANCER (ONCOLOGY AND ONCOHEMATOLOGY)	Dr. Juan de la Haba Rodríguez Dr. Marco A. Calzado Canale
• CHRONIC AND INFLAMMATORY DISEASES	Dr. Rosario López Pedrera Dr. Marina Álvarez Benito

C. 2. OTHER MEMBERS OF THE GOVERNING BODIES

• Dr. Luis A. Pérua de Torres	Principal Investigator GC12
• Ms. María Saarela	International Project Manager
• Mr. Antonio Luque Pineda	Clinical Trial Manager
• Ms. Esther Pacheco Rodríguez	Clinical Pharmacologist

» INTERNAL COMMITTEE MEMBERS BY GENDER

2.2 SCIENTIFIC STRUCTURE

IMIBIC research activities are organized into five scientific programs, each comprising different research groups. The scientific programs target health problems that are both important and widespread, identifying areas in which the Institute's researchers can combine their efforts in cross-cutting collaborative projects that address and respond to the most crucial health challenges facing European society today, in line with the priorities set out in the European Union's Horizon 2020 program. Each program is structured to support translational and clinical research that will guide researchers towards the primary goal of improving patient and community health. The programs are designed to foster interaction and cooperation between different groups, to attract new talent and to continually improve the career development opportunities of young researchers. Each of our scientific programs reflects the strengths of our research teams and showcases the areas of expertise of IMIBIC.

The programs are as follows:

» ACTIVE AGEING AND FRAILTY

This program is oriented towards understanding the molecular pathogenic basis of the ageing process in relation to quality of life and to pursuing new strategies in patient care. It includes the following lines of research:

- Immunology and senescence
- Care of the chronically ill
- Frailty and quality of life of the elderly

» NUTRITION, ENDOCRINE AND METABOLIC DISEASES

This program is oriented towards studying metabolic disorders and the endocrine system, in particular the role of nutrition in the prevention and management of these processes at different stages of life. It also focuses on studies of reproductive health and neuroendocrine tumours. It includes the following lines of research:

- Metabolic syndrome
- Reproductive health
- Paediatric and perinatal diseases
- Neuroendocrine tumours

» INFECTIOUS AND IMMUNOLOGICAL DISEASES AND ORGAN TRANSPLANTATION

This program focuses on the study of diseases caused by different infectious agents, with a special emphasis on infections in immunocompromised patients. It includes the following lines of research:

- HIV + Hepatitis C virus
- Transplants
- Multidrug resistance

» CANCER (ONCOLOGY AND ONCOHEMATOLOGY)

This program focuses on the study of neoplastic diseases, including both solid tumours and haematological neoplasms. It includes the following lines of research:

- Lung cancer
- Breast cancer
- Hepatocellular carcinoma
- Leukaemia and lymphomas
- Digestive tumours
- Other tumours

» CHRONIC AND INFLAMMATORY DISEASES

This program focuses on the study of a number of chronic diseases of modern society, emphasising those of an inflammatory nature. The program includes both basic research and clinical studies. Its ultimate aim is to promote a better understanding of the basis of chronic/inflammatory diseases and to improve therapies. It includes the following lines of research:

- Cardiovascular diseases
- Musculoskeletal and connective tissue diseases
- Neurological diseases and mental health
- Kidney and urological diseases
- Liver and digestive diseases
- Chronic inflammation and signalling

RESEARCH GROUPS

SCIENTIFIC REPORT IMIBIC 2022

SCIENTIFIC REPORT IMIBIC 2022

GOALS & HIGHLIGHTS IN 2022

3.1 GOALS FOR 2022

The institutional objectives marked for the year 2022 and approved by the Institute's Governing Council are outlined below.

GENERAL GOALS	RESULTS IN 2022
IMPLEMENTATION OF THE ACTIONS FORESEEN IN THE IMIBIC'S INTERNATIONALIZATION DYNAMIZATION PLAN	100% COMPLETED
PROPOSE ACTIONS TO STIMULATE AND PROMOTE THE INTERACTION OF SCIENTIFIC PROGRAMS, WITH A VIEW TO INCREASING INTRAMURAL COLLABORATION	100% COMPLETED
INTEGRATION OF THE PRIMARY CARE RESEARCH PERSPECTIVE IN THE DIFFERENT INTERNAL TRAINING AND RECOGNITION EVENTS OF THE INSTITUTE	100% COMPLETED
ATTRACTION OF A FLOW OF PRIVATE INVESTORS ORIENTED TO INNOVATION PROJECTS DEVELOPED AT THE INSTITUTE.	100% COMPLETED

3.2 HIGHLIGHTS

» INCREASE IN SCIENTIFIC PRODUCTION:

In 2022, IMIBIC's scientific production increased by 41% in comparison with 2020 and exceeded 730 publications. Likewise, the quality of publications has improved remarkably. The Crown quality indicator for the year 2022 - 1,91 points - represents an increase of more than 20% since 2019.

Interestingly, the number of publications in journals that exceed 15 impact factor points grew considerably, doubling in 2022 those published in 2021. Likewise, and in relation to the RRI (Responsible Research and Innovation) principles, more than 60% of the total number of articles were published in JCR Open Access journals.

» FUNDING

Funds raised in 2022 experienced an increase of more than 48% over the previous year. This increase has its origin, among others, in the INVESTIGO program for the incorporation of young people in their early stages of their research career. Moreover we increased competitive funds mainly from the Carlos III Health Institute, where 2 independent clinical studies in the areas of Hematology, Nephrology and Primary Care stand out, as well as the raising of funding from private sources, either through joint public-private collaboration calls, or through the implementation of clinical studies promoted by the pharmaceutical industry.

» HUMAN RESOURCES:

2022 has been an extraordinary year in terms of obtaining competitive funding for the incorporation of personnel. Thanks to the INVESTIGO program, both national (Ministry of Labor) and regional (Ministry of Employment) calls, IMIBIC will strengthen its research groups with the incorporation of more than 70 researchers in their pre-doctoral stage.

» RESPONSIBLE RESEARCH AND INNOVATION (RRI):

In recent years, the Institute's management has been making a great effort in the area of RRI, demonstrated by the organisation of the following activities:

- Creation of the Communication Committee, including researchers and the staff of the Department of Communication and Fundraising, with the objective of selecting the best papers published and disseminating it to the population, using a language that is accessible and understandable.
- Approval of the Equality Plan 2022-2026, being adapted in accordance with the applicable regulations. (Royal Decree 901/2020, of 13 October).
- IMIBIC's Plan Propio awarded 10 grants to support Open Access publications and research stays abroad. Visual material of all these RRI actions and campaigns is being promoted and disseminated to attract sponsors for their development.

SCIENTIFIC REPORT IMIBIC 2022

MANAGEMENT STAFF

5.1 R&D MANAGEMENT UNIT

The mission of the IMIBIC R&D Management Area is to offer a comprehensive service to research staff, both in the research groups and Clinical Management and Primary Care Units, through a single point of contact: the Project Manager. Its main objective is to provide professionals with the necessary support for the proper management and development of their scientific projects, agreements, service contracts and grants, and provide funding bodies with the corresponding justification and closure.

TEAM MEMBERS:

- **Miriam Cruzado Caballero**
Head of Unit
- **Inmaculada González Granados**
Project Manager (until April 2022)
- **Manuel Aguilar Panadero**
Project Manager
- **Carlos Lázaro Guevara**
Project Manager
- **Mónica Carrasco Jiménez**
Project Manager
- **Laura Bocero Fernández**
Project Manager (until May 2022)
- **José Carlos Prieto Baena**
International Project Manager
- **Maria Saarela**
International Project Manager (until October 2022)

5.2 INNOVATION & TRANSFER UNIT

The Innovation and Transfer Unit identifies intangible assets resulting from the research carried out within its competencies and provides comprehensive advice on the correct protection and transfer of research results. Ideas produced by researchers are also protected as intellectual or industrial property according to the UNE 166002: 2021 standard for innovation management.

The Innovation Unit provides advisory services to researchers on the transfer of their technologies, such as the drafting of licensing agreements, advice on the creation of start-ups or the establishment of public-private partnerships.

TEAM MEMBERS:

- **Luis M. Fernández Formoso**
Head of Unit
- **Antonio Ortega Llamas**
Innovation and Transfer Technician

5.3 FINANCIAL AND HUMAN RESOURCES UNIT

MANAGEMENT

The Financial Management and Human Resources Unit, which includes Accounting, Invoicing, Financial and HR services, provides the Research, Development and Innovation (R+D+i) Unit with general and administrative support, ensuring the optimal use of available resources.

The activity of the Unit is closely aligned with the Institute's mission and is therefore strongly committed to the management of Research and Innovation in the province of Cordoba.

SERVICES OFFERED BY THIS UNIT INCLUDE:

- Financial support for R+D+i projects
- Maximization of economic resources
- Management of agreements, contracts and private donations

- Human resources management
- Invoicing/billing and maintenance services associated with clinical trials and observational studies
- Budgetary control of activities
- Design and set up of information flows and activities.

TEAM MEMBERS:

- **Francisco Javier López Ruiz**
Head of Unit
- **Marisa Escabias Parejo**
Quality Specialist
- **David Luna Gómez**
Quality Assistant
- **Marta Manganaro**
Legal and Contract Specialist
- **Rosa M^a González Soler**
Contract Specialist (until April 2022)
- **Florencio Muñoz Encinas**
Accountant and Human Resources Specialist
- **Silvia Miranda Castellano**
Human Resources Specialist
- **Andrea Moyano Rojas**
Human Resources Assistant
- **Raquel Berdud Arias**
Grants & Projects Administrator
- **Marcos Notario Ríos**
Grants & Projects Administrator
- **Maria del Carmen García Serrano**
Clinical Research Assistant
- **Francisca Lobo Ávalos**
Invoicing Assistant
- **Inmaculada Varo Urbano**
Training Officer
- **Enrique Muñoz Baena**
IT Systems Coordinator
- **Manuel Jesús Carmona Hidalgo**
IT Systems Assistant
- **Javier Núñez Morales**
IT Systems Assistant

5.4 CORPORATE DEVELOPMENT

The Corporate Development Unit comprises the Communication, Fundraising and Management Control services and provides support and assistance to research groups, as well as to the Executive Board of the Institute.

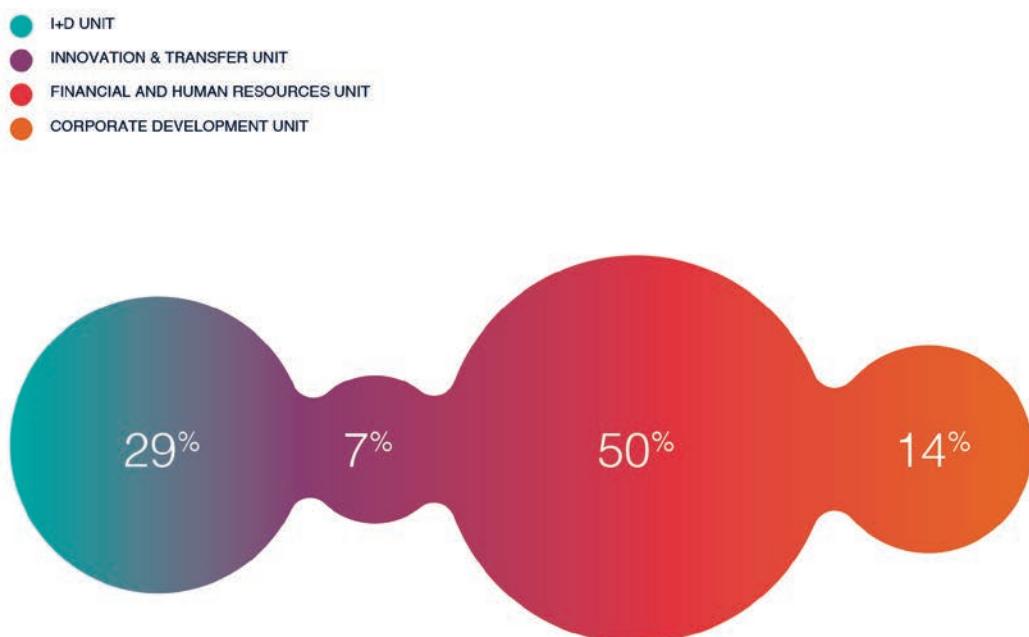

THE MAIN SERVICES OFFERED BY THIS UNIT INCLUDE:

- Increasing the visibility of the Institute in the province and elsewhere
- Management of fundraising through sponsorship and patronage
- Promotion and dissemination of research results
- Supporting researchers in the preparation and coordination of events
- Management of the Institute's website and social media accounts
- Production of promotional material
- Collecting and validating information relevant to the Institute for further analysis

TEAM MEMBERS:

- **Isabel De Castro Burón**
Communications Officer
- **José M^a Rubio García-Sotoca**
Communications (volunteer staff)
- **Estefanía Azcona Corrales**
Management Controller
- **Marta Granados Aguirre**
Administrative Assistant

SCIENTIFIC REPORT IMIBIC 2022

FUNDING

FUNDING

FIBICO is the financial and legal entity responsible for the management of IMIBIC. The following tables present the approved financial statements of FIBICO for 2022 compared to 2021.

» PROFIT & LOSS ACCOUNT (THOUSANDS OF EUROS)

	2022	2021
REVENUES	12,987.54 €	10,912.66 €
COST OF GOODS	-1,409.87 €	-1,440.87 €
PERSONNEL	-7,265.55 €	-6,045.94 €
OTHER EXPENSES	-3,392.70 €	-2,735.11 €
DEPRECIATION	-895.68 €	-623.57 €
NET INCOME	20.45 €	67.17 €

» BALANCE SHEET (THOUSANDS OF EUROS)

ASSETS	2022	2021
Non-current assets	9,719.66 €	8,221.81 €
Accounts receivable	13,129.09 €	8,327.00 €
Cash & cash equivalents	18,076.75 €	17,878.30 €
Current assets	31,205.84 €	26,205.30 €
Total Assets	40,925.30 €	34,427.11 €
LIABILITIES		
Non-current liabilities	3,794.29 €	6,855.82 €
Current liabilities	31,931.88 €	22,722.42 €
Equity	5,199.13 €	4,848.88 €
Total Liabilities	40,925.30 €	34,427.11 €

» OVERHEADS

The breakdown of project overhead revenues is as follows (thousands of euros):

OH from research projects	332
Private projects	185
Other	6
Total	523
Compensation to IMIBIC from Clinical Research	907

The accreditation guide for research institutes states that “at least 20% of the indirect costs received annually should be allocated to actions aimed at supporting IIS researchers, such as capacity building, training, co-financing of contracts, IIS own projects for emerging groups, etc.” In accordance with this, at least 104,600 euros should be allocated to these purposes.

Taking into account only co-financing of personnel expenses for competitive calls (Miguel Servet, Sara Borrell, private entities, etc), IMIBIC committed 349,600 euros to this item.

Each year, IMIBIC launches certain prizes and sponsorships for its groups and researchers, in accordance with the policy framework of its Research Promotion Plan (RPP), aimed at stimulating collaboration with external groups, increasing publications in open access journals, among others. Last year, the amount allocated to this item was 40,000 euros.

As part of its own program for the promotion of clinical research, the Institute also finances the contracting of staff required in the Institute's clinical research areas. The amount for staff associated with clinical research (nurses, coordinators, administrative staff, etc.) increased to 293,000 euros.

FUNDING

In terms of Funding, 2022 continued the positive trend of 2021, despite the absence of extraordinary calls for HR like those launched by the regional government in 2021.

As highlights, Clinical Trial invoicing exceeded 4 million euros, and funds obtained from ISCIII raised 5 million euros.

» THE BREAKDOWN OF FUNDS IS AS FOLLOWS (THOUSANDS OF EUROS):

	2018	2019	2020	2021	2022
IMIBIC Partners	900	900	900	900	900
Public Funding	4,430	5,078	7,752	6,679	11,505
Private Funding	4,544	5,061	5,397	6,317	8,173
	9,874	11,039	14,049	13,896	20,579
	2018	2019	2020	2021	2022
Total funds raised	9,874	11,039	15,396	13,956	20,579
	2018	2019	2020	2021	2022
National	3,927	3,320	4,510	5,264	7,671
Regional	453	746	3,241	1,416	3,534
International	50	1,012	0	57	300
IMIBIC Partners	900	900	900	900	900
Clinical Trials	2,472	3,248	3,384	4,097	4,652
Other Private Funding	2,072	1,813	2,014	2,222	3,522
TOTAL	9,874	11,039	14,049	13,956	20,579

As in previous years, the balance of private and public funding has been higher for public funding, although the percentage of private funds has increased in recent years:

» CLINICAL TRIALS

Clinical Research is one of IMIBIC'S main strategic pillars. The tables below show the total amount and trend for clinical trial invoicing signed by the Institute since 2017.

(thousands of euros)

	2017	2018	2019	2020	2021	2022
Clinical trials invoiced	1,922	2,472	3,248	3,384	4,097	4,651

The table below shows the most active medical services in terms of invoicing. At the same time, the management of IMIBIC and the HURS have also implemented a plan to add new medical services to this activity in order to provide the latest available treatments to the patients of Cordoba, as well as take further steps forward along the path of economic sustainability of the Institute.

Clinical Management Units	2017	2018	2019	2020	2021	2022
Oncology	623,740.64	1,051,109.07	1,740,243.38	1,557,507.14	1,874,701.37	2,201,761.51
Neurology	246,619.95	332,195.83	275,708.58	411,326.78	588,775.71	528,188.75

Digestive Health	108,596.63	101,872.23	135,662.11	122,986.16	114,066.95	133,282.24
Haematology	54,689.08	65,932.02	94,024.37	140,900.92	70,305.32	207,255.58
Top 10	1,647,575.90	2,404,379.70	3,146,016.17	3,203,941.13	3,715,116.01	4,356,152.65
% TOP10	84.9%	89.5%	90.7%	94.7%	92.0%	93.6%

To conclude this summary of IMIBIC funding, the evolution of revenues from the IMIBIC Biomedical Research Support Units should also be mentioned, since they had an outstanding performance during 2022. Members of these units are committed to improving the quality of research and improving financial sustainability.

THOUSANDS OF EUROS	2017	2018	2019	2020	2021	2022
Invoicing from UCAIBs	198.29	201.56	350.93	266.32	348.30	476.97

SCIENTIFIC REPORT IMIBIC 2022

FACTS & FIGURES

7.1 STAFF

RESEARCHERS IN IMIBIC GROUPS

IMIBIC comprises 49 research groups, made up of 31 consolidated, 5 emerging and 13 associated groups, respectively, in 2022.

- ASSOCIATED GROUPS
- EMERGING GROUPS
- CONSOLIDATED GROUPS

In 2020, IMIBIC implemented the 2020-2022 Action Plan as part of its Human Resources Strategy for Researchers (HRS4R), which was originally launched in 2017 after receiving the “HR Excellence in Research” award from the European Commission.

The IMIBIC HRS4R Action Plan is based on the recommendations and principles set out in the Charter & Code designed to ensure transparency, accessibility, equity and the pursuit of excellence in the recruitment of researchers.

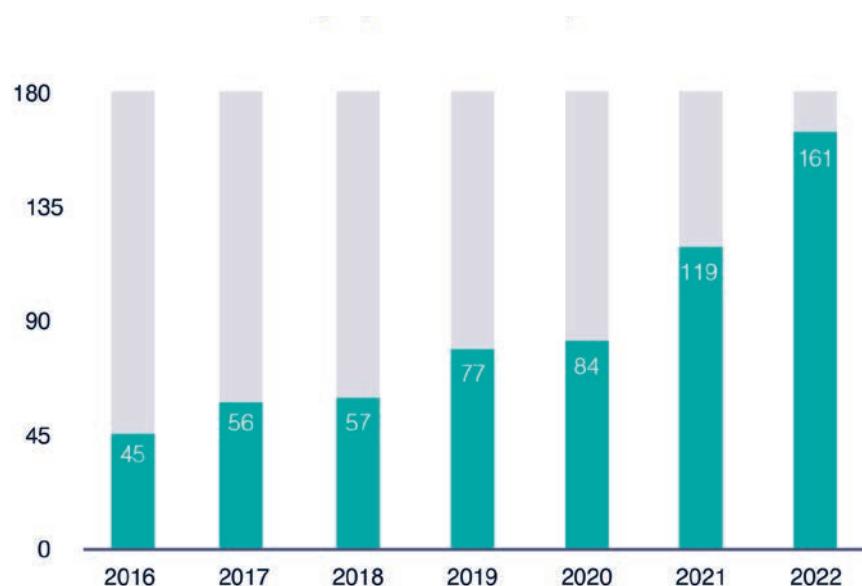

During 2022, an evaluation of the 2020-2022 Plan was carried out and the necessary documentation prepared in readiness for the external evaluation by the European Commission in 2023 to renew recognition of IMIBIC’s “HR Excellence in Research” award. The evaluation will involve presentation of a new self-assessment and the 2023-2025 Action Plan, as well as the visit of three European evaluators who will assess the implementation carried out so far and the future actions to be undertaken.

7.2 PUBLICATIONS

In 2022, our researchers contributed 823 scientific documents, 804 of which were published in journals indexed in the Web of Science citation database and ranked in quartiles according to journal impact factor.

The number of IMIBIC publications in Open Access increased by 123 in 2022 compared to 2021 (almost 60% of the total number of publications in both years).

7.5 CLINICAL TRIALS

The graphs below summarise the number of active clinical trials in 2022.

In 2022, 154 new clinical trials were started and 762 were ongoing. Of all ongoing studies, 450 were initiated within the last 3 years. These include 301 clinical studies with drugs, 122 observational studies and 27 trials of new medical devices.

ONGOING CLINICAL TRIALS IN 2022

OS: Observational Studies / ME: Medical Equipment

Most of the clinical trials were sponsored by Spanish industry and were in the areas of oncology, hematology, neurology, dermatology, rheumatology and internal medicine.

**SCIENTIFIC REPORT
IMIBIC 2022**

SCIENTIFIC REPORT IMIBIC 2022

SCIENTIFIC PRODUCTION

8.1. SCIENTIFIC PROGRAMS

SCIENTIFIC PROGRAM 1: ACTIVE AGEING AND FRAILTY

» GENERAL GOALS

The general objective of the Aging and Frailty program is to generate new knowledge to better understand the molecular and cellular basis of healthy aging that can be used to help design psychosocial and nutritional interventions to prevent frailty and age-associated diseases.

Aging is the major risk factor associated with cancer and chronic inflammatory diseases. Even though it is an area of active research worldwide, many aspects of the molecular and cellular basis of aging and age-associated diseases remain unknown. Cumulative evidence in the last decade strongly supports the importance of immunosenescence and inflammageing in these processes. The possibility of preventing or reversing age-associated alterations through the use of new therapies as well as psychosocial or nutritional interventions has also aroused great interest.

One of the main objectives of this program is to take advantage of the diversity of scientific backgrounds in the groups involved to support an interdisciplinary approach to aging ranging from analyses of the molecular and cellular aspects of cellular and system senescence to clinical and interventional approaches. One objective therefore is to integrate clinical and molecular information in order to understand the characteristics of healthy aging versus frailty and to identify mechanisms and pathways that can be used as novel therapy targets.

The research groups primarily involved in Program 1 have conducted a wide range of basic, clinical, and translational studies related to the specific objectives of the program that have resulted in a number of publications and competitive projects financed by regional and national agencies.

» SUB-PROGRAMS

- Aging of the immune system: Immunosenescence and inflammaging
- Frailty and well-being in the elderly
- Care of chronically ill patients

Following the research lines defined in Scientific Program 1, the various groups have focused their efforts on objectives aimed at:

- i) Defining the biomarkers associated with immunosenescence or inflammation in patients with AML, severe mental disorders, COVID-19, and other inflammatory and allergic diseases.
- ii) Analyzing psychosocial and nutritional factors in elderly individuals, the chronically ill and cancer patients to better stratify their state of health, and to assess the relevance of implementing care-based strategies improve their well-being.
- iii) Conducting metabolomic analysis on different functional nutrients and their potential anti-inflammatory capacity in experimental models.
- iv) Using physical, nutritional, and pharmacological approaches to treat age-associated chronic diseases

These studies have resulted in the award of projects in regional and national competitive calls and the publication of a number of papers in high-impact journals.

PROJECTS IN COLLABORATION PROGRAM 1

SCIENTIFIC PROGRAM 2: NUTRITION, ENDOCRINE AND METABOLIC DISEASES

» GENERAL GOALS

The general objective of the Nutrition, Endocrine and Metabolic Diseases program is to generate new knowledge in the field of nutrition, metabolic diseases and neuroendocrinology that will help prevent health problems in these areas and also improve their management. Modern societies face an epidemic of diseases associated with unhealthy diets, with metabolic diseases standing out as particularly important. Metabolic diseases are often associated with obesity and are the subject of active research. Despite considerable advances in our knowledge, we still do not know the exact causes of these diseases, which mechanisms are involved in their development, the nature of all their comorbidities or how to effectively prevent and treat them. These processes are very closely linked to life expectancy and quality of life, the wellbeing of society and the sustainability of public health services, which is why addressing them is a high priority. There is also considerable variability in both individual susceptibility to these diseases and their severity. Some of the factors that contribute to differences in individual susceptibility are already known or suspected, such as the genetic substrate, epigenetic components, neuroendocrine mechanisms in appetite regulation, along with molecular mechanisms in biology, such as oxidative stress, inflammation, fibrosis or the response to hypoxia. Following a multidisciplinary approach based on high precision medical techniques, the key objectives of our program are to integrate clinical and molecular information in order to identify the characteristics that make us unique and thus pave the way for personalized medicine in the future, particularly in the areas of obesity, cardiovascular disease, diabetes, reproductive alterations associated with metabolic disorders and neuroendocrine tumors. We consider it high priority that our scientific efforts foster synergies, promote talent and employability in the National Health System and accelerate the transfer and translation of our developments, thus contributing to the creation of added value in our society.

Since 2020, Scientific Program 2 has been implementing a wide range of basic, clinical, and translational research studies related to the specific objectives of its various sub-programs. These studies have resulted in a large number of publications and other scientific contributions that confirm the increasing trend of previous years. Likewise, the continuity and completion of a significant number of competitive projects funded by national and international agencies, as well as other achievements, such as invitations as guest speakers and awards received by the teams that make up the program, have contributed to building a profile of excellence, which forms the foundation for the development of a highly competitive research program on personalized and precision medicine, focused on dealing with a wide range of highly prevalent diseases, ranging from diabetes and obesity to various reproductive disorders.

» SUB-PROGRAMS

- Metabolic syndrome
- Reproductive health
- Pediatric and perinatal diseases
- Neuroendocrine tumors

» METABOLIC SYNDROME

The objectives of this sub-program for 2022 were successfully completed. In general, scientific output increased compared to previous years. More specifically, during 2022, relevant articles were published in first-decile/quartile journals with contributions providing answers to most of the sub-program's specific objectives: establishing possible mechanisms involved in the clinical development and regression of type 2 diabetes in the context of coronary heart disease, and defining the molecular bases for improving dietary intervention strategies, such as following a Mediterranean diet, to prevent recurrent cardiovascular events. Research projects funded in previous years continued to be developed in 2022, and new research projects with national funding, as well as clinical trials, were launched. As further indicators of excellence, some of the main results of its research were presented in the form of guest lectures at various international scientific conferences, and the sub-program has been able to attract and retain highly qualified human resources through highly competitive programs, such as the Marie S. Curie Actions, and Miguel Servet programs.

» REPRODUCTIVE HEALTH

The development of this sub-program has made substantial progress in achieving its specific objectives, which are to obtain a better understanding of the pathophysiology of widespread reproductive disorders frequently associated with metabolic and/or neuroendocrine alterations, as well as to pursue the development of new diagnostic and therapeutic strategies for these disorders. In 2022, this subprogram generated relevant articles published in first-decile/quartile journals, focused on the characterization of novel mechanisms for molecular and metabolic control of the reproductive axis. In addition, translational and clinical studies were conducted, focusing on the identification of novel biomarkers and potential new therapeutic strategies for common reproductive diseases with metabolic implications. These activities were carried out in the framework of up to eight competitive projects funded by international, national and regional agencies. Furthermore, through research agreements with pharmaceutical/biotechnology companies, preclinical studies were carried out to develop some of the contents of this sub-program. As further indicators of excellence, some of the main results of its research were presented in guest lectures at various international scientific conferences, and the sub-group has been able to attract and retain highly qualified human resources through highly competitive programs, such as the Marie S. Curie Actions, Ramon y Cajal and Miguel Servet programs.

» PEDIATRIC AND PERINATAL DISEASES

The activities of this sub-program have made significant progress towards meeting its specific objectives. There have been a considerable number of publications aimed at characterizing the molecular and hormonal bases of childhood obesity, as well as analyzing the impact of certain nutritional interventions in childhood on health promotion. These studies are complemented by others aimed at defining possible associations between metabolic factors and certain pediatric diseases, such as autism, as well as new methods for measuring the physical condition of pre-adolescents. The sub-program has also made significant preclinical contributions to the characterization of novel mechanisms involved in the control of puberty, particularly the basis for alterations in pubertal timing linked to early nutritional alterations, the prevalence of which is increasing. These activities were carried out within the framework of up to four national competitive projects, including a coordinated multicenter project aimed at studying molecular markers of metabolic risk in puberty, a clinical study focused on an analysis of Mediterranean lifestyle dietary habits in the prevention of childhood obesity, and a translational research project aimed at identifying new neuroendocrine mechanisms for controlling puberty and its alterations in conditions of obesity.

» NEUROENDOCRINE TUMORS

A full description of the activities and outputs arising from this sub-program in 2022 can be found in the summary of Scientific Program 4 (Cancer: Oncology and Oncohematology). However, it should be stressed that research groups from this sub-program also actively collaborate with teams mainly attached to Program 2, and contributions in the area of neuroendocrine tumors and related conditions remain an important component of this Program.

SCIENTIFIC PROGRAM 3: INFECTIOUS AND IMMUNOLOGICAL DISEASES AND ORGAN TRANSPLANTATION

» GENERAL GOALS

To follow a common line of high-quality research aimed at health problems related to host-foreign agent interactions, particularly in the fields of study of infectious, zoonotic, immunological and organ transplantation diseases. The aim of this research line is to obtain results that can be applied in and influence clinical practice among health professionals and which will enhance the quality of life of patients and social well-being generally. One key strategy is to strengthen links between research groups at regional, national and international levels and, when possible, with public or private companies. It is also crucial to set targets in research projects that ensure a greater guarantee of success, to help group members create new spin-offs, and to establish a solid foundation to support research training and guarantee stable employment for researchers. The actions adopted to achieve these targets must be specific and effective, using a translational approach that leads to improved quality of patient care, either through technology transfer of the results to industry or by applying them in clinical practice guidelines. In 2022, a total of 8 research groups participated in IMIBIC Program 3 (3 consolidated groups, 1 emerging group and 4 associated groups), which generated 99 publications, 31 active projects and 25 clinical trials during 2022.

» SUB-PROGRAMS

- HIV + Hepatitis C
- Transplantation
- Multiresistance

» HIV AND/OR HCV + HEV INFECTION

In the realm of HIV research and treatment, an internationally funded project has recently been launched with the primary aim of assessing the real-world effectiveness of a novel antiretroviral treatment combination. This study specifically targets patients grappling with severe immunosuppression due to HIV. Shifting our focus to hepatotropic viruses, a noteworthy milestone has been achieved with the publication of 19 research papers in this domain. Impressively, 15 of these papers have secured placement in Q1 journals, with a remarkable 14 of them earning a place in the prestigious D1 category. Among these publications, a groundbreaking discovery has been made concerning a zoonotic virus known as Rocahepevirus ratti, which has been identified as a new causal agent of acute hepatitis. This pivotal finding has been officially documented in the Journal of Hepatology, boasting an impressive impact factor of 30.083. Furthermore, within this dynamic research context, a new project sponsored by ISCIII, titled 'Magnitude and Clinical Impact of Orthohepevirus C Infection,' has been set in motion. Meanwhile, the scientific community has been alerted to the presence of the Hepatitis E virus in marine environments through a publication in the esteemed Emerging Infectious Diseases journal, which boasts an impact factor of 16.126. This research highlights the potential for human-source contamination in marine habitats, emphasizing the critical role of water control measures in preventing infections via this novel transmission route.

» TRANSPLANTATION/MULTIRESISTANCE

As part of these topics, a total of 22 publications were generated during 2022 (9 in Q1; 4 of them in D1). The clinical trial "Immunoguided Discontinuation of Prophylaxis for Cytomegalovirus Disease in Kidney Transplant Recipients Treated with Antithymocyte Globulin: A Randomized Clinical Trial" was published in Clinical Infectious Diseases (D1), with an impact factor of 20,999. This work has been selected as one of the most outstanding publications from Program 3. In the same area, the ISCII-financed study "Papel de los microRNAs en la respuesta inmune discordante frente a CMV e impacto en la reconstitución inmune y la replicación de CMV en trasplante de progenitores hematopoyéticos" as well as the ISCIII-financed clinical trial "ENSAYO CLÍNICO DE EFICACIA Y SEGURIDAD DE LA COMBINACIÓN DE PROFILAXIS DE DURACIÓN REDUCIDA SEGUIDA DE PROFILAXIS INMUNOGUIADA EN RECEPTORES DE TRANSPLANTE PULMONAR (ESTUDIO CYTOCOR)" were launched.

As regards the specific objectives of the Multiresistance subprogram, which features a close collaboration between the GC03 and GC24 groups, there was a sizeable scientific output in 2022. It is worth highlighting that researchers of Programme 3 coordinate the European project "Combatting Bacterial Resistance in Europe" (COMBACTE) within the European programme New Drugs 4 Bad Bugs (ND4BB). Some relevant results have been reported in several manuscripts, with the publication "In vivo selection of KPC-94 and KPC-95 in Klebsiella pneumoniae isolates from patients treated with ceftazidime/avibactam" being the most remarkable manuscript in this area. It has been published in INTERNATIONAL JOURNAL OF ANTIMICROBIAL AGENTS (D1), with an impact factor of 15,441. This work has been selected as one of the most outstanding publications from Program 3.

SCIENTIFIC PROGRAM 4: CANCER (ONCOLOGY AND ONCOHEMATOLOGY)

» GENERAL GOALS

Cancer is one of the leading diseases worldwide, with high prevalence and mortality rates. The annual incidence of cancer is also increasing, mainly due to the aging of the population. While the latest advances in research have led to better results in the treatment of some types of tumour, in others, there is an urgent need for improved molecular knowledge, as well as better prevention and diagnostic measures.

For these reasons, the overall goal of Scientific Program 4 is directed at improving the prevention, diagnosis and treatment of cancer in all its aspects, and its more specific efforts are focused on such crucial objectives as early detection, the search for new therapeutic targets and biomarkers, the development of new therapies, and the improvement of immunotherapy programs. This focus has helped the program to secure top-quality projects in highly competitive calls, as well as a considerable number of publications in high-impact magazines.

As a summary of the program's activity in 2022, its main goals were successfully achieved and significant results were obtained. This was reflected in the publication of 138 scientific articles, both by the program alone and in collaboration with other national and international groups. The program also managed 58 active research projects, all obtained through competitive calls. In the same year, 176 clinical trials, in different phases, were carried out, all of them related to different types of tumours and therapeutic approaches.

PROJECTS IN COLLABORATION PROGRAM 4

SCIENTIFIC PROGRAM 5: CHRONIC AND INFLAMMATORY DISEASES

» GENERAL GOALS

The extended life expectancy of the general population is directly correlated with the increased incidence of chronic and inflammatory illnesses. This has a significant impact on the well-being of affected individuals and plays a crucial role in their contribution to society. The long-term nature of these conditions also means that a substantial portion of healthcare budgets is allocated to disease management.

With these factors in mind, our program focuses on addressing chronic diseases from three key perspectives:

Improving our understanding of these diseases and characterizing their underlying molecular bases.

Using this new knowledge to design innovative therapeutic approaches that can improve prognosis and disease management.

Developing preventive strategies to delay or avoid the onset and progression of such conditions.

In essence, the primary goal of this program is to compile comprehensive clinical and molecular profiles underpinning the development of chronic diseases and coexisting conditions. We are also working to create novel therapeutic strategies that can be safely and effectively employed for the follow-up and management of these diseases.

In 2022, a total of 12 research groups (8 consolidated, 1 emerging and 3 associated) participated in IMIBIC program 5.

The teams involved in the program published numerous basic, clinical and translational research studies in the different areas of the subprograms, with a notable increase in the number of works published compared to 2021 (which meant almost 60 additional publications), approximately 40% of which appeared in journals belonging to the first quartile and/or decile. As a result, a significant increase in the overall impact factor (around 55%) was achieved.

A fundamental part of the achievement of the objectives for this program in 2022 can also be attributed to the implementation of numerous research projects at international, national or regional level, obtained in competitive calls by the research groups involved. In connection with this, the number of ongoing projects is also underlined, increasing by more than 55%, including several collaborative projects between groups belonging to this program.

Around 20% of the articles published involved close collaboration between 2 or more research groups belonging to the various subprograms. The contribution of emerging and associated groups was also fundamental.

The importance of the quality of the publications can largely be attributed to the successful establishment of national and international multicentre projects. These initiatives involved large groups of patients, paving the way for new clinical trials, and used animal models to study disease and its response to various therapies. These collaborative efforts contributed greatly to advances in research and understanding of the subject.

- » Neurological diseases and mental health
- » Kidney and urological diseases
- » Liver and digestive diseases
- » Chronic inflammation and signalling

» CARDIOVASCULAR DISEASES SUB-PROGRAM IN 2021

Groups involved: GC05, GC15, GA09

- Highlights of the action plans implemented include:
- Study of the mechanisms of atherothrombosis and liver damage in lupus and rheumatoid arthritis, integrating immunological, cellular, molecular, and epigenetic analyses.
- Characterization of complex coronary lesions and/or stents.
- Studies to evaluate the treatment of heart disease by percutaneous and transluminal treatment.
- Studies related to the care of patients with CV disease.

» DISEASES OF THE MUSCULOSKELETAL SYSTEM AND CONNECTIVE TISSUE

Groups involved: GC05

Action plans implemented:

- Cellular and molecular characterisation of systemic autoimmune diseases (systemic lupus erythematosus, rheumatoid arthritis and antiphospholipid syndrome): Analysis of mechanisms underlying the development of organ damage and cardiovascular disease and identification of biomarkers of response to new therapeutic modalities.
- Characterization of clinical profiles in patients with spondyloarthritis and psoriatic arthritis.
- Molecular mechanisms involved in metabolic comorbidities in psoriatic arthritis.

» NEUROLOGICAL DISEASES AND MENTAL HEALTH

Groups involved: GC28

Among the action plans implemented, the highlights were:

- Investigation of the mechanisms of neuromodulation underlying neurodegenerative processes such as multiple sclerosis, and study of the effect of different antioxidant agents, as well as transcranial magnetic stimulation, on neuroplasticity, cell death, oxidative stress and behavioural phenotype in these pathologies.
- Investigation of the role of oxidative status in neurodegenerative processes and other chronic pathologies.

» KIDNEY AND UROLOGICAL DISEASES

Groups involved: GC07, GC13

The highlights of the action plans implemented included:

- A search for innovative therapies in CKD, including cell therapy with mesenchymal cells and the development of a bioartificial kidney.
- Study of the relationship between extracellular vesicles, miRNA production and hemodialysis techniques.
- A study of the underlying basis of vascular calcification in chronic kidney disease. Role of the calcium-sensing receptor.
- Evaluation of inflammation and calcified vascular disease in uremia.
- Identification of biomarkers of kidney damage and vascular calcification.
- Vascular effects of elevated levels of FGF23 associated with chronic kidney disease.
- Comorbidities associated with chronic kidney disease; cardiovascular disease/cognitive impairment.
- Influence of phosphorus burden on chronic kidney disease progression: Role of Mg.

It should be noted that in recent years a new emerging group (GE06: Physiopathology of renal and vascular damage) has been involved in this sub-program, which has contributed both to expanding its scientific and strategic objectives and to improving its quality.

» LIVER AND DIGESTIVE DISEASES

Groups involved: GC02

Highlighted action plans include:

- Identification of clinical, molecular and cellular biomarkers of diagnostic and/or prognostic value, and effective therapeutic approaches in liver cancer and inflammatory bowel disease.
- End-stage liver disease and liver transplantation

» CHRONIC INFLAMMATION AND SIGNALLING

Groups involved: GC29, GA03

Highlights of the action plans implemented were:

- Transcriptome studies to characterize the involvement of immune system cells in dermatological pathologies such as atopic dermatitis, granuloma annulare and frontal fibrosing alopecia.
- Association between sleep-disordered breathing and prostate cancer.

- Development of clinical trials in patients with obstructive sleep apnoea syndrome.
- Serum markers in COVID-19 disease.
- Effectiveness and safety of calcifediol in the treatment of respiratory diseases.

Complementing work in the different subprograms, a transversal group played a key role by actively collaborating in the development of several subprograms:

Group GA08: Radiodiagnosis

Research conducted in 2022 focused mainly on:

- The study of cerebral vascular pathology
- Use of carotid echo-doppler (ultrasound) for detection of early atherosclerosis in autoimmune and chronic inflammatory diseases, and its association with therapeutic efficacy.
- Analysis of therapeutic efficacy in breast, prostate and other urological tumours.
- Artificial intelligence in breast cancer screening programs.

This research activity led to the publication of a number of articles produced as part of the group's own research projects or collaboratively with other IMIBIC groups in the areas of cancer, cardiovascular disease and kidney disease, funded by the Consejería de Salud de la Junta de Andalucía (Andalusian Regional Department of Health) and the Fondo de Investigación Sanitaria (Health Research Fund).

SCIENTIFIC REPORT IMIBIC 2022

PLATFORMS AND NETWORKS

IMIBIC researchers are involved in a wide range of strategic initiatives coordinated by the National Institute of Health Carlos III (ISCIII). These include the Thematic Networks for Cooperative Research in Health (*Redes Temáticas de Investigación Cooperativa en Salud*: RETICs) and the Networked Biomedical Research Centers (*Centros de Investigación Biomédica en Red*: CIBERs), among others. IMIBIC is also part of two European research infrastructures (EATRIS & ECRIN) and several other national and international networks.

Of the 49 groups integrated within the IMIBIC, twelve are involved in 16 different RETICs, fifteen are involved in 8 CIBERs (including the newly created CIBERInfec) and there are 37 groups involved in the Andalusian Plan for Research, Development & Innovation (PAIDI Programme).

**SCIENTIFIC REPORT
IMIBIC 2022**

TRAINING

Training is considered a fundamental institutional tool for achieving and improving the scientific objectives of the Institute. Each year, it draws up an extensive programme of events and training activities to promote and deliver quality scientific training to researchers at the Institute, tailored to the different stages of their scientific careers. The programme includes the organisation of an annual program of seminars given by well-known national and international authorities on the latest cutting-edge scientific topics, courses covering concepts related to our current lines of research, as well as practical applications of the latest technologies. Along with these activities, the Institute holds two key training activities: the annual Young Investigators Meeting, aimed at fostering interaction and knowledge exchange among our youngest researchers, and the Maimonides Commemorative Lecture, which includes a lecture given by a leading expert in Biomedicine, and the presentation of awards recognising the work of IMIBIC researchers with leading national and international scientists.

IMIBIC is similarly committed to the generation of talent and runs two postgraduate programmes in collaboration with the University of Córdoba: the Master's degree in Translational Biomedical Research and the PhD programme in Biomedicine. These programmes not only contribute to the professional qualification of students in the field of Biomedical Sciences and to the promotion of teaching, but also attract new scientific talent to the Institute.

» **TRAINING PROGRAM DIRECTOR:**

- Juan Manuel Castellano Rodríguez, PhD.

» **TRAINING OFFICER:**

- Inmaculada Varo Urbano
- David Luna Gómez

10.1 TRAINING PROGRAMS

PHD IN BIOMEDICINE

IMIBIC leads the PhD Programme in Biomedicine at the University of Córdoba. This programme, interdepartmental and multidisciplinary in scope, offers high-quality, advanced training and the development of human resources for teaching and research. In addition to promoting professional qualifications in the field of Biomedical Sciences, it also attracts new scientific talent to the Institute.

In 2022, this PhD program was coordinated by Marco A. Calzado Canale

Website: <https://www.uco.es/estudios/idep/doctorado-programas-biomedicina>

MASTER'S DEGREES

IMIBIC leads the Master's degree in Translational Biomedical Research at the University of Córdoba. This programme has a dual focus: to train students specialising in this area, as well as personnel specialised in the techniques and methodologies of translational biomedical research, enabling them to carry out technical work in support of research in the field of biomedicine and health.

- Academic Director: Prof. Raúl M. Luque Huertas, PhD.
- Academic Co-Director: Prof. Antonio Jesús Martínez Fuentes. PhD.

Website: <https://www.uco.es/estudios/idep/investigacion-biomedica-traslacional>

COURSES AND WORKSHOPS

Numerous courses, seminars and other training activities in different research areas were held at the IMIBIC during 2022. These can be found in the annexes at the end of this report.

10.2 TRAINING ACTIVITIES

IMIBIC RESEARCH SEMINARS

Regular seminars and research events provide an opportunity to meet renowned national and international speakers covering a wide range of topics in biomedicine. IMIBIC research seminars promote networking and strengthen the knowledge of the Institute's research community. The Institute organises annual seminar series aimed at promoting interaction, sharing ideas, and strengthening links between IMIBIC scientists and recognised scientists from other research institutions. In 2022, a total of 15 external seminars were held.

Furthermore, a fortnightly cycle of intramural seminars, first launched in 2015, also gives young (preferentially postdoctoral) researchers from our Institute an opportunity to present work in progress. In 2022, a total of 7 intramural seminars were held.

10.3 INSTITUTIONAL EVENTS

13TH IMIBIC YOUNG INVESTIGATOR MEETINGS

IMIBIC Young Investigator Meetings provide an ideal environment for young scientists to enhance their skills and knowledge as well as an interface to foster translational research from basic experimental science to clinical medicine that will improve health and quality of life. The aim of these meetings is to promote inter-disciplinary research and, above all, high-quality training by sharing the results obtained by young researchers at IMIBIC and related institutions, as well as other groups at the University of Cordoba.

More specifically, the aims of IMIBIC Young Investigator Meetings are:

- To provide a platform to discuss the latest knowledge and methods in translational medical research.
- To promote interaction and the exchange of ideas between pre- and postdoctoral scientists and to strengthen links between research groups.
- To facilitate interdisciplinary actions and communication that bring together basic and clinical researchers.
- To encourage and provide high-quality scientific training for young researchers.
- To establish annual IMIBIC Meetings as a young, vibrant forum of reference for the research community and our young researchers in particular.

The 13th Meeting was held in the IMIBIC building on 13-14 October 2022. The programme included sessions representative of IMIBIC Scientific Programmes, as follows:

13th IMIBIC
**YOUNG
INVESTIGATORS
MEETING**

PROGRAMME

Day 1 (13th OCT)

08:30 – 09:00

Registration and Poster display

09:00 – 09:30

Opening ceremony (IMIBIC Assembly Hall)

09:30 – 11:00

SESSION I. Cancer I (IMIBIC Assembly Hall)

Chairs: Dr. Ana Gordon & Dr. David García.

→ Ia. 09:30 – 09:45

Tumor suppressor role of RBM22 in prostate cancer acting as a dual-factor regulating alternative splicing and transcription of key oncogenic genes. **Antonio Jesús Montero Hidalgo.**

→ Ib. 09:45 – 10:00

Adoptive transfer of human allogeneic Natural Killer cells for the improvement of anti-EGFR therapy in colorectal cancer: a preclinical study. **Carmen Navarrete Sirvent.**

→ Ic. 10:00 – 10:15

Left Atrial Strain Assessment in Long-Term Survivors of Childhood Acute Lymphoblastic Leukemia. **Consuelo Fernández-Avilés Irache.**

→ Id. 10:15 – 10:30

Laparoscopic Versus Open Primary Interval Cytoreductive Surgery and Hyperthermic Intraperitoneal Chemotherapy (HIPEC) in Peritoneal Carcinomatosis from Epithelial Advanced Ovarian Cancer: a comparative study. **Manuel Durán Martínez.**

→ Ie. 10:30 – 10:45

Proteomic dysregulation of splicing machinery is associated to aggressive hepatocellular carcinoma. **Natalia Hermán-Sánchez.**

→ If. 10:45 – 11:00

Revealing DYRK2 as a new regulator of the key MAPK pathway and its implications in colorectal and breast cancer. **Lucía Suanes Cobos.**

11:00 – 11:30

Coffee Break (IMIBIC Cafeteria)

11:30 – 12:45

SESSION II. Multidisciplinary I (IMIBIC Assembly Hall)

Chairs: Dr. Pedro Jesús Gómez & Dr. Antonio Romero

→ IIa. 11:30 – 11:45

Impact of KPC-producing Klebsiella pneumoniae relative bacterial load on all-site infection and all-cause mortality in patients with intestinal colonization: a prospective cohort study. **Alejandra Méndez Natera.**

→ IIb. 11:45 – 12:00

A pain-free home-based exercise program reduced kidney disease progression respect to the usual care in patients with claudication: an observational study. **Anna Crepaldi.**

→ IIc. 12:00 – 12:15

SARS-CoV-2's accessory proteins role in endothelial dysfunction. **Antonio Romero Guillén.**

→ IId. 12:15 – 12:30

Non-sense mediated decay as a potential source of biomarkers in chronic liver disease. **Betsaida Ojeda Pérez.**

→ IIe. 12:30 – 12:45

Characterization of extra-musculoskeletal manifestations and their influence on the phenotype of spondyloarthritis. Data from REGISPOSNER registry. **Ignacio Gómez García.**

12:45 – 13:45

Poster session I (IMIBIC Meeting & Multipurpose Room)

Chairs: Dr. María Soledad Avendaño, Dr. Mario Frías & Dr. Alexander Batista

→ PSI.a. Analysis of the contribution of p53 in the metabolic regulation of Kiss1 neurons at female puberty. **Silvia Daza Dueñas.**

→ PSI.b. Role of NADH-cytochrome b5 reductase 3 in acute kidney injury associated to massive intravascular hemolysis. **Cristina García Caballero.**

→ PSI.c. Quantification tool of intestinal microbiota for the prediction of developing diabetes mellitus type 2. **Javier Arenas Montes.**

→ PSI.d. Ecological and clinical impact of an antimicrobial stewardship program on the incidence of carbapenem resistant Klebsiella pneumoniae. **Teresa López-Viñau López.**

→ PSI.e. ZIF-8 nanoparticles incorporated in kidneys scaffolds: A novel approach in the uremic toxins depuration. **Victoria Pulido Escribano.**

- PSI.f. Determining the Difficulties of Students with Dyslexia via Virtual Reality and Artificial Intelligence: An Exploratory Analysis. **José Manuel Alcalde Llergo.**
- PSI.g. Lumbopelvic rhythm in patients with acute low back pain compared with axial spondyloarthritis and healthy subjects. **Sandra Alcaraz Clariana.**
- PSI.h. Design of novel mRNA vaccine candidates for induction of antibodies, TCD4+ and TCD8+ cell responses. **Amina Aldebis Moreno.**
- PSI.i. Inflammatory cytokines: definition of normal values in healthy population. **Paula Álvarez Romero.**

- ➔ PSII.dd. Anti-glomerular basement membrane glomerulonephritis. A study in real life. **Marina Sanchez-Agusta Martinez.**
- ➔ PSII.ee. Could the primary cilium predict progression from actinic keratosis to squamous cell carcinoma? **Alicia Sanz Zorrilla.**
- ➔ PSII.ff. Comparative Study of a Sjögren's Syndrome Cohort (Primary and Secondary). **José Miguel Sequí Sabater.**
- ➔ PSII.gg. Analysis of the potential role of hepatic kisspeptin in energy and metabolic homeostasis. **Esperanza Uceda Rodriguez.**
- ➔ PSII.hh. Oxidative environment and redox homeostasis in a rare malignant disease: Pseudomyxoma Peritonei. **Francisca Valenzuela Molina.**
- ➔ PSII.ii. Ferroptosis is involved in acute kidney injury associated to massive intravascular hemolysis. **Mercedes Vallejo Mudarra.**
- ➔ PSII.jj. Prognostic value of RAS mutation status changes in circulating tumor DNA of metastatic colorectal cancer patients. **Alicia Vargas Aliaga.**
- ➔ PSII.kk. Gut microbial composition as a diagnostic tool for colorectal cancer. **Ana María Vega Rojas.**
- ➔ PSII.ll. The role of physical activity on psychological well-being in children and adolescent with type 1 diabetes: preliminary data of a cross-sectional study. **Joaquín Villaécija Rodriguez.**
- ➔ PSII.mm. Adipokines and hepatokines as potential biomarkers of hepatocellular carcinoma. **Javier Manuel Zamora Olaya.**

11:30 – 13:00**Session VI. Nutrition, Endocrine and metabolic diseases II (IMIBIC Assembly Hall)****Chairs: Dr. Clementina López & Dr. Cristian Rodeiro**

➔ VIa. 11:30 – 11:45

Personalized diagnostic and therapeutic potential of miR-191-5p in the pathophysiological relationship between obesity and prostate cancer. **Francisco Porcel Pastrana.**

➔ VIb. 11:45 – 12:00

The role of intestinal microbiota in the different prevalence of coronary disease between genders. **Helena García Fernández.**

➔ VIc. 12:00 – 12:15

Impaired metabolic and inflammatory profile in adult patients with a history extra-uterine growth restriction. **Laura Palomino Fernández.**

➔ VID. 12:15 – 12:30

Micronutrients and their implications in the incidence of type 2 Diabetes Mellitus. Pieces of evidence from the CORDIOPREV study. **Lorenzo Rivas García.**

➔ VIe. 12:30 – 12:45

Effect of diet on the expression of microRNAs and its relationship with aging in patients with coronary heart disease: CORDIOPREV study. **Maite Sánchez Giraldo.**

➔ VII. 12:45 – 13:00

Novel multiagonist therapy for efficient management of metabolic complications polycystic ovary syndrome. **Victor Serrano López.**

13:00 – 14:00**Plenary Lecture: Immunometabolism and Inflammation. Dr. Maria Mittlebrunn (Centro de Biología Molecular Severo Ochoa, Madrid, Spain)****14:00 – 14:30****Awards and Closing ceremony**

This edition consisted of 8 sessions (2 on cancer, 2 on nutrition and frailty, 2 were multidisciplinary and 2 poster sessions) and two presentation formats: lectures and poster talks. A total of 117 papers were received and the number of registered attendees was 248.

12TH MAIMONIDES COMMEMORATIVE LECTURE AND IMIBIC AWARDS

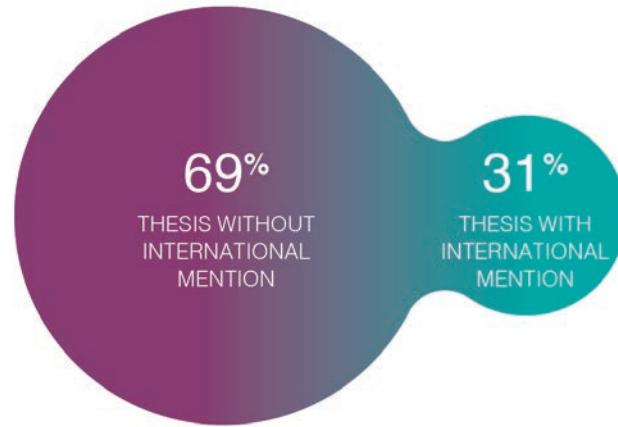

The aim of this initiative is to recognise the biomedical research carried out by IMIBIC staff and to highlight the importance of the results obtained at the Institute. The 2022 “Enrique Aguilar Benítez de Lugo” Prize for the most outstanding scientific publication led by IMIBIC researchers in collaboration with international groups was awarded to Consolidated Group GC05 “Systemic and chronic inflammatory autoimmune diseases of the locomotor system and connective tissue” (doi: 10.1136/annrheumdis-2021-220308). The award for the best clinical research work went to Consolidated Group GC09 “Nutrigenomics. Metabolic Syndrome” (doi: 10.1161/STROKEAHA.120.033214).

Each year, an outstanding biomedical scientist is invited to present the “Maimónides Lecture”, which focusses on the latest knowledge in basic, applied, and/or translational biomedical science of excellence. In 2022, the guest speaker was Dr. María Neira, director of Public Health and Environment at the World Health Organization, who works to raise awareness of the public health challenges posed by climate change and air pollution.

10.4 RESULTS OF TRAINING ACTIVITIES

» THESES PRESENTED: 2021/2022 ACADEMIC YEAR

RESEARCH STAYS

IMIBIC is committed to promoting stays for the training of its PhD students at national and international reference centres in biomedical research, providing opportunities to experience research in foreign settings, facilitating the integration of graduates into the scientific community, and creating networks. In fact, the Institute's "Plan Propio" (Own Plan) includes actions to promote these stays.

Twelve researchers from the IMIBIC completed a research stay at a national or international centre in 2022. Eight of these were students of the PhD programme in Biomedicine, who will therefore be able to opt for the "International Doctorate" mention.

External visitors are also invited to carry out their research at our Institute. A total of 20 visiting scientists stayed at IMIBIC during 2022.

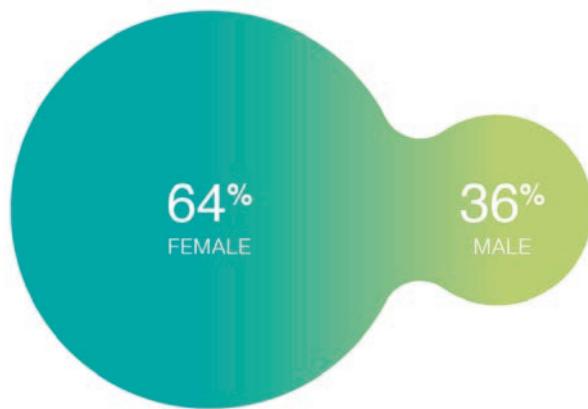

TRAINING ATTENDANCE IN 2022

The total number of participants in all training activities held at IMIBIC in 2022, including courses, conferences, seminars and other activities, was 608. Participants were predominantly women.

INNOVATION AND TECHNOLOGY TRANSFER

The main objective of the Innovation and Technology Transfer Plan is to strengthen IMIBIC's existing capabilities in order to create a strong ecosystem to support innovation and translational research to the Spanish National Health System. More specific objectives are to promote and increase effective transfer with an impact on the National Health System and society, to encourage transfers to the productive sector, to promote public-private collaboration, and to guarantee the sustainability and quality of the Innovation Unit and the UCAIB for Technological Innovation. The two units work closely together to transform the ideas of IMIBIC inventors into minimum viable products and to scale them according to TRL levels.

The following indicators are implemented by the IMIBIC Innovation and Transfer Unit:

- Patent registration and licensing.
- Knowledge transfer to the productive sector.
- Development of new healthcare products.
- Implementation of new clinical processes.
- Creation of spin-offs and start-ups.
- Clinical Practice Guidelines.

These indicators were integrated into the Innovation and Technology Transfer Plan (2021-2025) in full alignment with European, national and regional policies.

As a result of actions carried out in 2022, 13 patents or intellectual property registrations were applied for, 5 exploitation licence agreements were signed, 4 prototypes were developed by the UCAIB for Technological Innovation, and the pathway for performing surgical planning services in the CMU for neurosurgery was established.

In accordance with the Innovation and Technology Transfer Plan, contacts continue to be made with companies to establish collaborations or service provision agreements with companies for the development of innovations or validation of their technologies. More than 27 such contacts with companies have been made.

In addition, we initiated a presentation of the Innovation Unit's portfolio of services to different Clinical Management Units and IMIBIC research groups to publicise new services available to the groups and to increase the number of prototype developments made.

Creation of companies: the Innovation and Technology Transfer Unit has been advising Dr. Carlos Pérez, a researcher belonging to research group GC05 "Systemic and Chronic Autoimmune Diseases of the Locomotor System and Connective Tissue" on the creation of a company, which led to the constitution of EBT COBIOMIC BIOSCIENCE SL in August 2022. COBIOMIC BIOSCIENCE SL is the first company in Andalusia involving the participation of a Foundation from the RFGI [a member of the Network of Research Management Foundations] (FIBICO) and a University (UCO).

The funding obtained through the ISCIII/ Strategic Action in Health 2022 call for the implementation of innovation projects was €192,390. These funds will be used to develop a diagnostic and prognostic tool for hormone-dependent cancers, a software tool to correct gender disparities in access to liver transplantation, and to identify phenotypes, targets and therapeutic biomarkers in patients with psoriatic arthritis.

Two applications were submitted to the ISCIII-CDTI call and two to the Public-Private call of the State Research Agency. Also noteworthy is the granting of an application to the ESAL 2022 call, which will enable the first Biotech Hackathon in Andalusia to be held.

In 2022, the internal call for the IMIBIC 2022 Innovation Awards was launched, which was well received by researchers. A total of 20 applications were submitted in four categories.

One of the milestones of 2022 was the acquisition by IMDEEC [the Municipal Institute for Economic Development and Employment of Córdoba] of the building in Rabanales 21 that will house Córdoba BIOTECH. This is a technology-based business incubator, in which FIBICO, the UCO and IMDEEC are partners. The bio-incubator is expected to be operational in 2023. The purpose of BIOTECH is to incubate biotech companies that will contribute to the growth of an entrepreneurial ecosystem in the city of Cordoba.

In 2022, IMIBIC continued to carry out the actions of the ITEMAS platform (Innovation in Medical and Health Technologies) funded by the Carlos III National Health Institute (ISCIII). It also continued as coordinator of the Quality Commission. IMIBIC was also included in the 3D Bioprinting Hub of the ISCIII Biobanks and Biomodels Platform. Finally, IMIBIC organised the ITEMAS 2022 Conference, which had more than 150 attendees, including researchers, management staff from the different IIS, staff from investment vehicles, and technology centres and companies.

The IMIBIC Innovation Unit also successfully passed the Quality Management System recertification audit, in accordance with the UNE 166.002:2021 standard that has been implemented at IMBIC for years.

BIOMEDICAL RESEARCH SUPPORT UNITS

12.1 ISOTOPE AND PRECLINICAL IMAGING UNIT

STAFF

Eduardo Muñoz Blanco, PhD

Supervisor

Miguel Ángel Rodríguez Martín

Technician

BRIEF DESCRIPTION

The Preclinical Imaging Service (PIS) is a highly advanced facility providing non-invasive, *in vivo* imaging of the structure and function of body organs and tissues in preclinical animal models.

The equipment is located in the IMIBIC animal facility, which has modern premises of approximately 800 m² and capacity for housing and experimental management of >3,500 rodents. It is ideally situated to provide interdisciplinary support in cardiovascular biology, oncology, neuroscience and physiology studies, among others.

The main purpose of the service is to supply high-quality imaging support to the rest of the research groups in IMIBIC.

EQUIPMENT AND FACILITIES

» ISOTOPE UNIT

The unit has two laboratories dedicated to work with both γ and β radioactive isotopes. One is located on floor -2 and the other on the third floor.

The unit has been authorized by the Nuclear Safety Council since December 2014 to work with the following isotopes:

ISOTOPES	MAXIMUM ACTIVITY (MBQ)
Carbon (C-14)	370
Tritium (H-3)	370
Phosphorus (P-32)	370
Phosphorus (P-33)	370
Sulfur (S-35)	370
Chrom (Cr-51)	370
Iodine (I-125)	370

» EQUIPMENT

- Gamma Counters. 3 units:
 - Make: Wizard
 - Model: 2470-0100 Beta counter
- UN Beta Counter.1 unit:
 - Make: Tricard
 - Model: 2810 TR
- MicroBeta Counter.1 unit:
 - Make: Microbeta2
 - Model: 2450-0020
- Cell harvester
- A sample preparer
 - Make: Janus
- Two refrigerated ultracentrifuges with capacity for 200 samples.
- Three gas cabinets exclusively for working with radioactive isotopes, two with lead guillotines, one with a methacrylate guillotine.
- Two radiation detectors:
 - Make: Lamse
 - Model: RM10013-RDM

» PRECLINICAL IMAGING UNIT

• **PET / MR 3T** is the only combined magnetic resonance and PET equipment available in the country. The PET equipment is based on highly sensitive, continuous LYSO crystal technology with 2 rings with 8 detectors, and has a transaxial field of view (FoV) of 80 mm, an axial FoV of 148 mm, and total FoV of 285 mm (axial) by moving the table, MRI-compatible silicon photo-multipliers, sensitivity 5%, up to 9% (NEMA standard) and sub-millimetre resolution (≤ 0.7 mm). The MRI equipment is 3 Tesla with 18 cm cryogen-free magnet, no cooling line required. Magnet homogeneity is ± 0.1 ppm (DSV 5 cm) and ± 0.05 ppm (DSV 3.5 cm), necessary to work with diffusion sequences, and localized spectroscopy with a gradient system capable of providing 450 mT / m.

The PET / MR has an automatic positioning system for the animal in both the PET and MRI modalities, and a touchscreen with integrated camera to facilitate positioning and monitoring.

This equipment was installed in June 2018 and will be available for use after an appropriate set-up procedure, to be done in the near future.

• **μ CT (SkyScan 1176 model)** is an X-ray microtomography system (90 kV source) enabling 3D spatial resolution of less than 10 μ m, and a respiratory gating system for prospective or retrospective extraction of respiratory motion during image emission. The system features a 12-bit, distortion-corrected, 11-megapixel refrigerated X-ray chamber (4000x2670) with fibre-optic coupled scintillator.

Full-body scanning capability of rats and mice: 68mm or 35mm scan diameter, scan length up to 200mm by multiple, automatically connected scanners. This μ CT equipment can carry out longitudinal tests with less than 10 mG radiation exposure, as well as coregistration of PET and MRI images.

MAIN SERVICES

Training in the handling of β and γ counters.

- I-125 labelling of proteins.
- Identification of protein levels in serum, plasma and other biofluids using the RIA technique.
- In situ hybridization (ISH) with 33P-labelled probes.
- Radioactive techniques for analysis of cell death and proliferation.
- Consultation on the different isotopic techniques used in the laboratory.
- Protocol optimization.
- Advice on experimental design, selection of equipment and supervision of procedures.
- Advice during data acquisition and imaging procedures using MRI, microCT and PET.

» SPECIFIC APPLICATIONS:

- MRI Applications:
 - Structural analysis of soft tissues and body composition (compartmentalization).
 - Analysis of structures by diffusion (diffusion-weighted imaging).
 - Analysis of metabolic composition by spectroscopy.
 - Analysis of brain activity using fMRI.
- MicroCT Applications:
 - Structural analysis.
- PET Applications:
 - Analysis of metabolic activity (normal and tumour tissue).

The infrastructure necessary to house the PET-MR and MicroCT preclinical imaging systems inside the Animal Experimentation Unit was designed in collaboration with the Radiological Protection Service of the University of Córdoba and the Diagnostic Radiology and Nuclear Medicine Unit of the HURS. This work was carried out in order to define optimal equipment and workflows prior to bidding for equipment.

BRIEF DESCRIPTION

IMIBIC's Animal Experimentation facilities are part of the SAEX of the University of Cordoba. The purpose of this service is to provide the biomedical community, other public research centres and private companies with the animals, facilities, equipment, materials and specialized personnel necessary to carry out research projects and/or teaching tasks that require the use of animal models. The fundamental objective of the animalarium service is to guarantee the maintenance and well-being of the animals, as well as to offer different techniques for their study, given the range of equipment available in our unit. This IMIBIC service is designed for the breeding, housing and use of laboratory animals (rats and mice), as well as for pig experimentation. Its facilities and personnel comply with current Spanish and European legislation (Directive 2010/63/EU, European Commission Recommendation 2007/526/EC, Spanish Royal Decree 53/2013 and Order ECC/566/2015 of the Spanish Ministry of Economy and Competitiveness).

The facilities of the IMIBIC animal experimentation unit, coordinated by the Animal Experimentation Service of the University of Córdoba, were opened in 2017.

EQUIPMENT AND FACILITIES

The unit comprises:

- A treatment room equipped with body composition measurement equipment, a respirometry chamber (with capacity for 10 animals) and optogenetic equipment. 7 rooms for housing rodents.
- 1 healing / metabolism room: This room is equipped with a respirometry system, two racks for metabolic cages, optogenetic and quantitative analysis equipment as well as equipment for MRI of body composition.
- 4 multi-purpose rooms for experimental procedures with animals: two rooms for use with rats and two for use with mice. The rooms are equipped with a replacement cabinet, 2 gas extraction cabinets, analytical scales, combi refrigerators and other basic laboratory material.
- 1 multi-purpose room, with PET-MR and micro CT equipment.
- Operating Theatre: Suitable for rodent and larger animal surgery (rodents and pigs), equipped with 3x 3D laparoscopy towers, 7 TV video monitors, 3 large animal anaesthesia machines, 6 surgery tables, 2 rodent anaesthesia systems with 4 seats, 1 rodent anaesthesia system with 2 seats, 6 gas towers, 1 surgical microscope for large animals, 1 high-end ultrasound, 3 magnifying glasses, 1 microscope, 1 C-arm and a surgical robot.
- Quarantine Zone: 5 ventilated racks for rats / mice, 1 replacement cabinet and 1 triple gate SAS system.
- 1 large animal (pig) room: 6 transport cages and 1 isolation cage.
- Laboratory 1 is equipped with micro-CT/PET/MR for rodents, a gamma library, a ventilated cabinet for 6 animals and an anaesthesia machine.
- The operating theatre consists of 6 surgery workstations for pigs (operating table and gas system), 3 anaesthesia machines, 3 laparoscopy towers, 1 surgical magnifying glass, 1 arc light and 1 ultrasound scanner.

There are also 4 laminar flow hoods, 2 gas extraction hoods, 2 hot plates for rodents, 1 microscope, 3 magnifying glasses, 4 scales.

The rederivation procedure has now been implemented and micro-CT/PET/MR is expected to be launched shortly.

KEY FACTS

NUMBER OF IMIBIC USERS: **60**

NUMBER OF EXTERNAL USERS: **0**

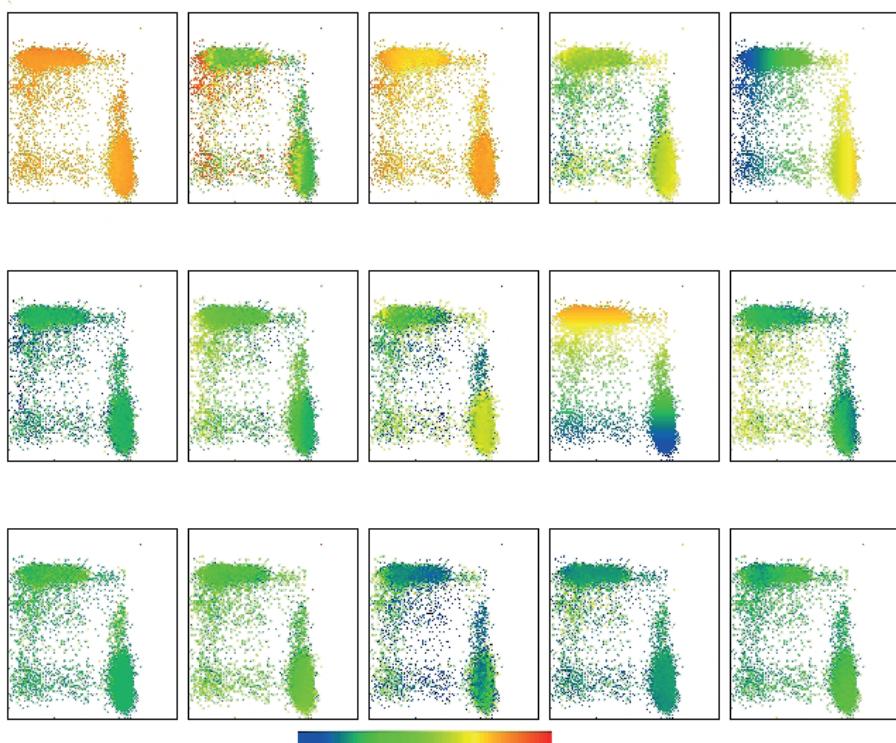

PROJECTS

1. 30/01/2018/009 /Kisspeptinas y pubertad. Nuevos aspectos fisiológicos e implicaciones fisiopatológicas en alteraciones puberales asociadas a pubertad /Manuel Tena Sempere/GC-10.
2. 23/08/2018/126 / Papel de las kisspeptinas en el control del metabolismo y balance energético. Implicaciones fisiológicas y fisiopatológicas/Manuel Tena Sempere/GC-10.
3. 09/08/2019/140 / Desafiando la hipótesis KND y mediante edición genómica con CRISPR-Cas9: Evaluación del papel de la neuroquímica B y la dinorfina en las neuronas kiss1 en el control de la fertilidad/Manuel Tena Sempere/GC-10.
4. 09/08/2019/141 / Investigación traslacional sobre el hipogonadismo incluido por obesidad: bases fisiopatológicas e implicaciones para la mejora diagnóstica y terapéutica/Manuel Tena Sempere/GC-10.
5. 10/09/2020/109 / Análisis del papel de las taquiquininas en el control de la ovulación: caracterización de las funciones del sistema substancia-P/Receptor de taquiquininas tipo I (Tac1/Tacr1) /Manuel Tena Sempere/GC-10.
6. 04/06/2020/074 / Implicaciones fisiopatológicas y valor diagnóstico de miRNAs candidatos involucrados en el desarrollo temprano de obesidad y enfermedad metabólica. Estudio CHILDEM/ Juan Roa Rivas/GC10
7. 22/02/2021/019 / Mecanismo sensores del estado metabólico y nutricional en neuronalKiss1- Implicaciones en el control de la pubertad y sus alteraciones en condiciones de la obesidad de inicio temprano / Manuel Tena Sempere / GC10.
8. 22/02/2021/018 / Análisis del uso terapéutico del tungstato sódico para el tratamiento del síndrome poliquístico (SOP) empleando modelos preclínicos / Manuel Tena Sempere / GC10
9. 1/06/2020/071 / Estudio del efecto de fármacos en el modelo de traumatismo cerebral inducido/Carmen María Navarrete Rueda/GC-04.
10. 23/03/2018/034 / Estudio del efecto de derivados cannabinoides en el modelo de esclerodermia inducida por angiotensina II/Belén Palomares Cañero/GC-04.
11. 31/03/2022/057 / Estudio del efecto de fármacos en modelo de isquemia extremidades inferiores /Adela García Martín / GC04
12. 15/05/2018/088 / Nuevos mecanismos moleculares en la interacción patológica entre obesidad y diversos tipos de cáncer endocrinometabólicos: Identificación de nuevos biomarcadores diagnósticos, pronósticos y terapéuticos/Raúl Miguel Luque Huertas/GC-27.
13. 05/06/2018/098 / Mecanismos moleculares implicados en los procesos de adhesión y migración celular: efecto del tratamiento de enfermedad renal crónica sobre la función endotelial/Fátima Guerrero Pavón/GC-07.
14. 06/07/2018/113 / Caracterización de los cambios en Wnt inducidos por esclerosina y su repercusión en el trastorno mineral, óseo y vascular asociado a la enfermedad renal crónica / Yolanda Almadén Peña / GC13

15. 14/03/2018/026 / Efecto del calcimimético AMG641 sobre el remodelado óseo en un modelo de enfermedad renal/Yolanda Almadén Peña./ GC13
16. 16/11/2017/155 / Efectos de los probióticos sobre la función renal, la microbiota y el desarrollo de calificaciones vasculares asociadas a la enfermedad renal/Yolanda Almadén Peña/GC-13.
17. 12/12/2019/196 / Desarrollo de un modelo de ratón de Pseudomixoma peritoneal con xenoimplante humano/Manuel Tena Sempere/GE-09.
18. 15/03/2022/040 Estimulación inmunogénica basada en terapia con células T autólogas combinada con inhibidores PDL1 y MEK en los subtipos moleculares de cáncer colorrectal / Silvia Guil Luna / GC06
19. 23/09/2022/115 Identificación de biomarcadores diagnósticos, pronósticos y terapéuticos en tumores neuroendocrinos y cáncer de páncreas / Alejandro Ibáñez Costa / GC08

12.3 FLOW CYTOMETRY AND ADVANCED OPTICAL MICROSCOPY UNIT

12.3.1 FLOW CYTOMETRY

STAFF

Esther Peralbo Santaella, PhD

Head of Unit. Flow Cytometry Technical Specialist- Contract, Assignment of Technicians to Common Research Support Structures program; Funding Agency: ANDALUSIAN HEALTH SERVICE; Reference: S.A. 0008/22.

BRIEF DESCRIPTION

The mission of the Unit is to offer IMIBIC and hospital researchers, as well as other public and private sector institutions, access to high performance equipment covering a wide range of applications in the field of flow cytometry, and to provide technical expertise and training. The Unit also provides scientific-technical advice on experimental design, sample preparation, cytometry data analysis and interpretation of results.

EQUIPMENT AND FACILITIES

Analysers:

- » **BD LSRFortessa SORP**: 5 lasers (355, 405, 488, 561 and 640 nm) capable of analysing up to 18 fluorescence parameters + FSC/SSC. Filter for violet SSC.
- » **BD FACSCanto II**: 3 lasers (405 nm, 488 nm and 633 nm). Capable of analysing 8 fluorescence parameters + FSC/SSC. Multi-tube carousel loader (up to 40 tubes). Filter for violet SSC.
- » **BD FACSCalibur**: 1 laser (488 nm). Capable of analysing 3 fluorescence parameters + FSC/SSC.

Cell sorter:

- » **BD FACSaria III**: 3 lasers (407, 488 and 633 nm) and capable of analysing 13 parameters simultaneously (11 fluorescence parameters + FSC/SSC). Four-way and single-cell sorting capabilities. Sorted cells: can be collected into tubes, onto plates or slides. Temperature control. Aerosol management option (AMO).

Others:

- » **PC workstation** with Flow Cytometry data analysis software **BD FlowJo v10. (NEW)**

MAIN SERVICES

- Self-use (without facility operator assistance) of flow cytometry analyzers (only for IMIBIC users duly trained by us to use the equipment).
- Operator-assisted use of analyzers on demand.
- Cell sorting: only provided as an operator-assisted service.
- Flow cytometry data analysis on demand. The Unit also offers registered users access to a PC workstation with BD FlowJo data analysis software.
- Advice on experimental and multicolor panel design, sample preparation methods, interpretation and presentation of data, and writing of flow cytometry section in Material and Methods.
- Development/implementation of flow cytometry assays/applications according to user needs.

KEY FACTS

NUMBER OF IMIBIC USERS: 26 (13 RESEARCH GROUPS)

NUMBER OF EXTERNAL USERS: 1 (UNIVERSITY OF CORDOBA)

NUMBER OF INTERNAL PROJECTS SUPPORTED: 16

COURSES AND TRAINING SESSIONS: 3

NEW INTERNAL SERVICES: 1 (PC workstation with BD FlowJo v10 software for flow cytometry analysis)

COURSES AND WORKSHOPS

1. Course: “FUNDAMENTOS Y APLICACIONES BIOMÉDICAS DE LA CITOMETRÍA DE FLUJO”. 1st (January) and 2nd (September) Edition. Training activity accredited by the Andalusian Agency for Healthcare Quality-ACSA (1.18 credits), linked to the Biomedicine PhD Program Training Plan at the University of Cordoba.
2. Course: “Introducción al manejo del software de análisis para Citometría BD FlowJo” (in collaboration with Becton Dickinson).

12.3.2 ADVANCED OPTICAL MICROSCOPY UNIT

STAFF

Gema García Jurado, PhD

Head of Unit. Technical Specialist in Microscopy– Contract, ISCIII Biobanks and Biomodels Platform. PT20/00079.

BRIEF DESCRIPTION

The Advanced Optical Microscopy Unit of IMIBIC is available to IMIBIC researchers and to public and private users in biomedical research.

The purpose of the service is to provide comprehensive support to researchers as well as scientific and technical advice and support on experimental design, sample preparation, image processing analysis and data interpretation.

EQUIPMENT AND FACILITIES

Equipment:

- **Zeiss LSM 710 Spectral Confocal Laser Scanning Microscope:** inverted motorized stand. 7 laser lines: 405, 458, 488, 514, 543, 594 and 633 nm. Scanning module with 3 spectral R/FL detection channels (PMTs) and 1 transmitted light channel (PMT). Large integrated incubation chamber.
- **Leica THUNDER Imager 3D assay:** Motorized inverted microscope and software with THUNDER Computational Clearing. 4 Filter cubes for DAPI, FITC, Rhod and Cy5. Illumination: epifluorescence, brightfield and phase contrast.
- **Zeiss PALM MicroBeam. Laser Microdissection:** one excitation laser line (355nm) fully motorized, with high precision cutting and catapulting, and “cap check” system. Transmitted light techniques (bright field, phase contrast), 4 filter cubes for DAPI, FITC, Red and Cy5.
- **Zeiss Axio Vert.A1** inverted **fluorescence** microscope. Illumination: brightfield and epifluorescence. Filter cubes for DAPI, FITC and Cy3. Digital monochrome CCD camera.
- **Leica DM2000 LED** Upright microscope with LED **transmitted-light** illumination. Digital camera color HD.
- **Nikon Eclipse Ti-S** inverted **fluorescence** microscope. Illumination: brightfield, contrast phase and epifluorescence. Filter cubes for DAPI, FITC and Cy3. Digital camera color.
- **Image Analysis Workstation:** AIVIA CellBio, FIJI, LAS X, Zen Blue, QuPath, CellPose.

Applications

The main applications carried out in this Area include:

- Laser scanning confocal microscopy
- Automated widefield microscopy
- High content screening
- Live 3D imaging
- On-line computational clearing
- Laser cutting
- Spectral imaging and linear unmixing
- Image processing and analysis

MAIN SERVICES

- Self-use (without facility operator assistance) of microscopy equipment.
- Operator-assisted use of instruments.
- Image processing and analysis.
- Advice and support on experimental design, sample preparation methods, image interpretation and presentation of results.
- Development/implementation of microscopy assays/applications, and image analysis tools according to user needs.

KEY FACTS

In 2022, the Advanced Optical Microscopy Unit achieved the requirements for a Quality Management System in accordance with the ISO 9001:2015 Quality Standard.

New equipment and services added to the Microscopy Unit include:

- An advanced high-resolution, high-speed widefield fluorescence microscopy system for automating 2D and 3D image capture (THUNDER Imager 3D assay imaging system, Leica).
- Laser Microdissection Service for fluorescent and histology specimens dissection- Image Analysis service with workstation and licensed software (AIVIA).

This Unit provided technical support and scientific-technical advice to 11 Consolidated Research Groups of IMIBIC, 2 Emerging Research Groups and 1 Associated Research group.

NUMBER OF IMIBIC USERS: **56**

NUMBER OF EXTERNAL USERS: **3**

COURSES AND TRAINING SESSIONS: **31**

FEATURED ARTICLES

A total of eight scientific articles using data generated by the Unit were published during 2022. Articles acknowledging the support of the Unit are listed below.

COURSES AND WORKSHOPS

- 44 specific training sessions for research groups in the use of microscopy equipment, technical applications and image analysis related to the Unit's equipment:
- 3 technical application seminars were given in the area of Advanced Optical Microscopy:
 - "Laser Microdissection - Bridging the gap between Microscopy and Molecular Biology". Monika Stich, Senior Application Specialist Light Microscopy, Zeiss.
 - "Los datos en su contexto: Microscopía 3D automatizada para muestras grandes". Luis Muñoz, Imaging Specialist, Miltenyi Biotec España.
 - "Adquisición de imágenes multiview en especímenes vivos y órganos completos clarificados". Jaques Paysan, 3D Application Specialist, Zeiss.

12.4 IMIBIC MASS SPECTROMETRY AND MOLECULAR IMAGING UNIT (IMSMI)

STAFF

Eduardo Chicano Gálvez, PhD

Core Facility Coordinator.

Mass Spectrometry Specialist: LC-MS, MS Imaging. Bioinformatics and data analysis.

- Recipient of a competitive contract under the “Assignment of Technicians to Common Research Support Structures” call for proposals; Funding Agency: ANDALUSIAN HEALTH SERVICE; Reference: RF2-0003-2020.

Ángela Peralbo Molina, PhD

Mass Spectrometry Specialist (Lipidomics and metabolomics)

- Recipient of a competitive contract under the “Assignment of Technicians to Common Research Support Structures” call for proposals; Funding Agency: ANDALUSIAN HEALTH SERVICE; Reference: RF2-0013-2022

Pilar Luna García

Support technician.

- Wet lab, sample preparation and lab maintenance support - Operational Programme for Youth Employment and Youth Employment Initiative (POEJ 2021). Junta de Andalucía, 2021. May 2022.

BRIEF DESCRIPTION

The Mass Spectrometry and Molecular Imaging Unit (IMSMI) at IMIBIC provides highly specialised support in the latest mass spectrometry techniques available to researchers and users who require it. The Unit specialises in offering services in three of the major omics, namely, proteomics, lipidomics and metabolomics. It is also highly specialised in molecular imaging (MS Imaging).

The IMSMI Unit provides researchers with state-of-the-art technologies in the field and offers its services to IMIBIC research groups, as well as to the University of Cordoba, Reina Sofia University Hospital, other universities, hospitals, and private sector companies.

This Unit has four main lines of work:

- I. The Clinical Proteomics line, consisting of high-performance liquid chromatography (Evosep One) coupled with mass spectrometry (LC-MS/MS), which gives researchers and users access to label-free quantitative clinical proteomic analysis in liquids (DDA, DIA-PASEF and PRM-PASEF). Studies that can be developed range from small pilot experiments and small populations to large experiments with hundreds of samples requiring superior speed and quality.
- II. The Lipidomics line, consisting of ultra-high performance liquid chromatography coupled with mass spectrometry (LC-MS/MS). It provides a service, using a targeted or untargeted approach, for high resolution identification and quantification of lipid species in samples.
- III. The Metabolomics line, consisting of ultra-high performance liquid chromatography coupled with mass spectrometry (LC-MS/MS). It offers a service, using a targeted or untargeted approach, for high resolution identification and quantification of metabolites in samples.
- IV. Molecular Imaging (MS imaging), which provides researchers and users with spatial information about metabolites, lipids, proteins/peptides directly from tissue and biopsy samples.

The IMSMI Unit provides individualised support tailored to the user's needs, including project planning/experimental design, sample preparation, mass spectrometry analysis and basic and advanced data analysis, with the latest developments available in its area of expertise.

EQUIPMENT AND FACILITIES

- Q-TOF mass spectrometer, MALDI-TOF, TIMSTOF-Flex (Bruker) (Last update:2022)
- Q-TOF mass spectrometer, TIMSTOF-Pro (Bruker) (Last update: 2021)
- Q-TOF mass spectrometer, Triple TOF 5600+ (Sciex) (Last update: 2014)
- MALDI-TOF/TOF Mass spectrometer, 5800 (Sciex) (Last update: 2014)
- EVOSEP ONE (Evosep) (Last update: 2021)
- ELUTE UHPLC (Bruker) (Last update: 2021)
- nanoHPLC: Eksigent LC400 (Sciex) (Last update: 2014)
- Sprayer: HTX M5 (HTX Technologies) (Last update: 2021)
- Sprayer: Sunchrom Suncollect (Sunchrom, Friedrichdorf, Germany) (Last update: 2014)
- Main programs (and programming languages) used for data analysis: Protein Pilot, Comet and X! Tandem, Proteowizard, TransProteomicsPipeline, MS-Fragger for protein identification; Peak View, Marker View, Skyline, DIANN, MS-Fragger for protein quantification and spectral library generation; Tissue View, MSIReader, Spectralanalysis, Cardinal, SCILS for Maldi Imaging MS. R, Python and Matlab for general analysis purposes. MetaboScape and TASQ for metabolomics (lipidomics workflow) (Last update: 2018 - 2021)
- PaSER: Parallel Search Engine in Realtime (Bruker) (Last update: 2021)
- Spectronaut: DIA analysis for protein identification and quantification (SN18, Last update: 2023)
- Basic laboratory equipment for sample preparation (Last update: 2014)

MAIN SERVICES

- Identification and characterization of proteins by LC-MS/MS: DDA-PASEF
- Quantitative Proteomics:
 - DIA-PASEF
 - DIA-SWATH
 - PRM-PASEF
 - Mass clinical proteomics analysis using Evosep One
- Lipidomics and Metabolomics: Identification, characterization and/or quantification of small molecules in a wide range of samples.
- MALDI mass spectrometry imaging (Proteomics/Lipidomics/Metabolomics)
- Project supervision and collaboration
- Training in the software used for data analysis

PROJECTS

- Characterization of different omics levels using MS-imaging, from lipidomics to proteomics, and detection of neurotransmitters in model organism brain. LP-CSIC-UAB Proteomics Unit.
- Proteomic study of nasopharyngeal aspirates in neonates. Pediatric Unit, Puerta del Mar Hospital, Cádiz.
- Massive proteomic analysis of patients with hepatic steatosis. GC26. Clinical Virology and Zoonoses.
- Pilot proteomic analysis of cell lines exposed to anticancer treatments. GC30 Molecular Hepatology.
- Proteomic MS-imaging analysis of radiologically invisible prostate cancer tissues. GE05 Genitourinary System Disorders.
- MS-imaging proteomic study of the human olfactory bulb. Proteomics Unit, IdISNA-Navarrabiomed.
- Development of MS-imaging technology applied to metabolite detection in cell cultures. University of Valencia.
- Proteomic analysis in fibroblast cultures. IBIS, IBIS Proteomics Unit.
- MS-imaging proteomic study for analysis of response to a pharmacological candidate in leishmaniasis-affected skin. GC03 Infectious Diseases.
- Pilot metabolomic analysis for metabolite monitoring in fibroblast culture. GC06 New Therapies in Cancer.
- Establishment and development of a measurement method for monitoring a low molecular weight compound in dialyzed patients. CG13 Calcium Metabolism. Vascular Calcification.
- Method establishment in HURS Microbiology Area; MALDI-TOF for measurement and characterization of specific intact proteins from *Klebsiella pneumoniae*.
- Massive proteomic analysis, identification of proteins, and quantitative analysis of differential expression in human THP1 cells under 4 different conditions. Cardiovascular Regenerative Therapy and Applied Proteomics Group. INIBICA.
- Massive proteomic analysis of *Pseudomonas pseudoalcaligenes* cultures. Department of Biochemistry and Molecular Biology, University of Córdoba.
- Identification and characterization of proteins from protein extract obtained from Iberian newt eggs. GE07 Visual Quality.
- Quantitative proteomic comparison between two samples obtained from primary cultures: mouse embryonic hearts versus derived epithelium. Development and Cardiovascular Disease Group. UMA-IBIMA.
- Lipidomic profiling of patients using two different sample types (blood and fibroblasts) by LC-MS/MS. Mainly sphingolipids (monohexosylceramide, lactosylceramide, ceramides), glucocerebroside, cholesterol, and oxysterols. Movement Disorders Group. IBIS.
- Proteomic analysis of immunoprecipitated cell culture samples for enrichment in proteins related to an interaction of interest (interactomics). GC11 Adipocyte Metabolism and Differentiation. Metabolic Syndrome.
- Study to determine changes in the proteomic profile of the human SHSY5Y cell line after differentiation with a neurogenesis-inducing compound. GC04 Inflammation and Cancer.
- Proteomic analysis of plasma from patients with neurodegenerative diseases to search for useful biomarkers in early detection. Vascular Pathophysiology Group. National Hospital for Paraplegics, Toledo.
- Proteomic analysis of mouse renal and hepatic tissue under different stress conditions. GE06 Renal and Vascular Damage Pathophysiology.
- Massive proteomic analysis of mouse brain tissue with human xenografts. Neuropsychopharmacology and Psychobiology Group. INIBICA.
- Development and implementation of a proteomic analysis system in LCM sections in collaboration with the Advanced Microscopy Unit of IMIBIC.

COURSES AND WORKSHOPS

- Master's degree in Translational Biomedical Research. Subject Proteomics
- Open seminars via social networks (Twitter chats)
- Individualised advanced training for research staff: Proteomics/Metabolomics/MS Imaging.
- Mentoring of pre-doctoral students and students in professional training.
- Post-doctoral short-term internships for advanced mass spectrometry analysis
- Attendance at International and National congress and scientific publications.

12.5 GENOMICS UNIT

STAFF

Álvaro Jiménez Arranz

Head of Genomics Unit. Senior Genomics & Clinical Genomics Specialist - Recipient of a competitive contract from the 2015 call for "Ayudas para la Vinculación de Técnicos de Apoyo a ECAIs" (SSPA).

Beatriz Domingo Escudero

Senior Genomics Technical Specialist - Contract financed with FIBICO-IMIBIC own funds.

Pilar Rubín González de Canales

Laboratory Technician - Recipient of a competitive contract from the 2020 call for "Ayudas para Personal Técnico de Apoyo"(MICINN).

BRIEF DESCRIPTION

The Genomics Service provides researchers with cutting-edge equipment, as well as scientific and technical advice on the development of various analytical techniques used in the comprehensive study of DNA and RNA. This allows researchers to obtain high-quality results for the development of outstanding translational biomedical research.

The Genomics Unit offers its services to researchers at IMIBIC and in other public and private institutions. The Unit works closely with other Research Support Services, such as Bioinformatics, Proteomics and Cytometry.

EQUIPMENT AND FACILITIES

The resources currently available in the Genomics Unit are:

- **Illumina MiSeq**

» MiSeq is an Illumina sequencing technology based on SBS (sequencing by synthesis), which is currently the most widely adopted NGS (next generation sequencing) technology in the world for its speed, accuracy and quality. This sequencer can generate up to 15 Gb/run and 2x300bp paired-end reads, leading to greater accuracy, especially in problematic areas such as those involving homopolymers. The MiSeq system allows researchers to perform DNA-Seq, RNA-Seq, Methyl-Seq and ChIP-Seq analysis, which have a wide range of applications.

- **nCounter DX / NanoString technology**

» The NanoString nCounter analysis system uses a novel molecular barcoding technique linked to specific probes that can detect and count hundreds of targets in a single reaction without amplification, so that users can profile large numbers of mRNA, miRNA and DNA molecules simultaneously with gold standard sensitivity and reproducibility. Its applications include gene expression analysis, gene fusion, copy number variation (CNV) and simultaneous analysis of mRNA and miRNA.

» These applications, together with its Dx/CE-IVD certification for healthcare-quality analysis, make nCounter a tool with high potential for clinical use. One example is the FDA-approved and CE-marked in vitro diagnostic (CE-IVD) assay for breast cancer, Prosigna-PAM50, based on molecular analysis of gene expression profiles of 50 genes. This test classifies the tumor into one of 4 intrinsic subtypes related to disease prognosis and choice of treatment.

- **Digital PCR (dPCR): QX200 Droplet Digital PCR System**

» Droplet digital PCR offers a more precise and sensitive alternative to conventional qPCR for absolute quantification and detection of rare alleles without the need for standards or endogenous controls due to droplet partitioning.

- **Quantitative PCR (qPCR)**

The Unit has 3 qPCR platforms for genotyping and gene expression studies:

» Light Cycler 96 (96-well platform)

» 7900 HT Fast (384-well platform)

» Biomark HD-Juno (High-throughput nanofluidics platform)

For IMIBIC research staff, the Unit offers the possibility of using the qPCR platforms on a self-service basis (without technical operator).

- **Other**

The Unit has additional equipment for the quantification, quality analysis and determination of the size of nucleic acid fragments:

» DeNovix DS-11 (Spectrophotometer)

» Quantus (Fluorometer)

» 2200 TapeStation (Microelectrophoresis)

The Unit has been awarded several grants to fund new qPCR equipment (96 and 384 wells) and a new single-cell genomic analysis system. This will make it possible, among other things, to analyze and compare gene expression profiles between individual cells.

MAIN SERVICES

- Technical support and scientific and methodological advice in the choice and optimization of genomic techniques
- Design support for NGS or nCounter target panels
- Technical and scientific support in the use of qPCR platforms and probe design
- Nucleic acid quality controls (spectrophotometry, fluorometry and microelectrophoresis).
- nCounter analysis of targeted gene expression panels (up to 800 genes).
- PAM50 breast cancer prognostic gene signature (ProsignaTM) analysis.
- nCounter analysis of customized panels for the detection of target fusion genes.
- nCounter screening of up to 800 miRNAs in tissue, peripheral blood cells and serum/plasma.
- Gene expression and genotyping studies using real-time PCR
- Absolute quantification by droplet digital PCR (viral load analysis etc.)
- Liquid biopsy (cfDNA): Rare mutation detection by ddPCR, and NGS analysis of SNVs, indels, CNVs and fusions.
- Analysis of SNVs, indels and CNVs in peripheral blood cells and tissue by NGS or nCounter assay.
- Characterization of bacterial populations by 16S rRNA sequencing and shotgun sequencing.
- Targeted sequencing for the characterization of Mycobacteria and SARS-CoV-2 (epidemiological monitoring protocol)
- RNA-seq
- ChIP-seq
- DNA methylation analysis by NGS.
- NGS library preparation.
- NGS (Next Generation Sequencing) by Illumina MiSeq.
- Training and support in the use of data analysis software related to Unit technology
- Project supervision and partnerships

KEY FACTS

In 2022, the Genomics Unit continued the trend of a steady increase in the number of projects and users since it was established in 2015; 19,971 research and clinical diagnostic samples were analysed in 2022 using Unit technologies and 145 users were supported. Users belonged to 25 of the 48 IMIBIC groups, 2 departments of the University of Córdoba (Genetics Department-Faculty of Sciences, and Pathological Anatomy Department-Faculty of Veterinary Science) and 3 departments of the Reina Sofia University Hospital (Pathological Anatomy, Oncology and Microbiology). External centres that requested our services included the CIMA-Center for Applied Medical Research, Navarra, the CUN/UNAV-Navarra University Clinic, ULL-University of La Laguna-Tenerife, UCLM-University of Castilla-La Mancha, UCM-Complutense University of Madrid, TTD-Group for the Treatment of Digestive Tumours, and the GEICAM-Spanish Breast Cancer Research Group.

Previously implemented protocols and services have been improved in accordance with the principles of good laboratory practice (GLP) to guarantee the quality, reproducibility and reliability of the results. New oncology- and microbiology-based services have been developed using NGS, including TMB (Tumour Mutational Burden) analysis in tissue, sequencing of *Mycobacterium*, and virome analysis of vertebrate tissue to discover potentially pathogenic viruses that could involve zoonotic diseases. The Unit also participated in interlaboratory validation studies using clinical samples of the Plasma-SeqSensei Colorectal and Breast Cancer RUO kits from Sysmex, aimed at detection of mutations in cfDNA of patients with colorectal and breast cancer, respectively, to test for drug response and monitoring.

The Genomics Unit of IMIBIC has been accredited as a Clinical Genetics Unit since 2021 and is a member of a multidisciplinary team, together with several departments of the Reina Sofia University Hospital (HURS), working on the implementation of genomic diagnostic protocols in the Andalusian Public Health Service. The Unit carries out services developed in conjunction with the Departments of Anatomic Pathology, Oncology and Microbiology of the HURS, such as the PAM50-breast cancer prognostic gene signature (ProsignaTM) test and is a member of the Research Committee in Molecular Clinical Oncology, focused on the evaluation of NGS as a diagnostic, prognostic and therapeutic tool for oncology patients.

The Unit participates in the Pharmacogenetics Working Group of the SCReN (Spanish Clinical Research Network) of the Carlos III Institute of Health, in the Pethema Foundation program for the implementation of NGS as a diagnostic tool for myeloid leukemia, and collaborates with the TTD (Group for the Treatment of Digestive Tumors) and GEICAM (Spanish Breast Cancer Research Group) groups. The Unit is part of several laboratory networks, such as the EATRIS network (European Infrastructure for Translational Medicine), Innolabs and the Novartis laboratory network for clinical trials.

In 2022, the Genomics Unit also obtained ISO 9001:2015 certification for its quality management system and has received several grants from the 2021 call of the "Programa Estatal de Investigación y Equipamiento Científico-Técnico" (MICINN) for the financing of new qPCR equipment (96 and 384 wells) and a new single-cell genomic analysis system.

NUMBER OF IMIBIC USERS: 145 (25 IMIBIC GROUPS)

NUMBER OF EXTERNAL USERS: 11 (7 EXTERNAL CENTRES)

NUMBER OF PUBLICATIONS: 9

NUMBER OF ONGOING PROJECTS: N/A

COURSES AND TRAINING SESSIONS: 8

FEATURED ARTICLES

- A total of nine scientific articles were published in 2022 using Genomics Unit equipment:
- High-throughput RNA sequencing transcriptome analysis of ABC-DLBCL reveals several tumor evasion strategies. Serrano López J, Jiménez-Jiménez C, Chutipongtanate S, Serrano J, Rodríguez-Moreno M, Jiménez Á, Jiménez Y, G Pedrero S, Laínez D, Alonso-Domínguez JM, Llamas Sillero P, Piris MÁ, Sánchez-García J. Leuk Lymphoma. 2022 Aug;63(8):1861-1870. doi: 10.1080/10428194.2022.2056173. Epub 2022 Apr 4. PMID: 35379068 (GC16)
- Identification of molecular pathways and protein-protein interactions in adipose tissue-derived mesenchymal stromal cells (ASCs) under physiological oxygen concentration in a diabetic rat model. Paco-Meza LM, Carmona M, Cañadillas S, Lopez-Diaz A, Muñoz-López F, Jimenez-Arranz A, Guler I, Herrera C. Iran J Basic Med Sci. 2022 Feb;25(2):155-163. doi: 10.22038/IJBMS.2022.59004.13107. PMID: 35655589; PMCID: PMC9124531 (GC14)
- Impact of FLT3-ITD Mutation Status and Its Ratio in a Cohort of 2901 Patients Undergoing Upfront Intensive Chemotherapy: A PETHEMA Registry Study. Ayala R, Carreño-Tarragona G, Barragán E, Boluda B, Larráyoz MJ, Chillón MC, Carrillo-Cruz E, Bilbao C, Sánchez-García J, Bernal T, Martínez-Cuadron D, Gil C, Serrano J, Rodriguez-Medina C, Bergua J, Pérez-Simón JA, Calbacho M, Alonso-Domínguez JM, Labrador J, Tormo M, Amigo ML, Herrera-Puente P, Rapado I, Sargas C, Vazquez I, Calasanz MJ, Gomez-Casares T, García-Sanz R, Sanz MA, Martínez-López J, Montesinos P. - Effect of aflibercept plus FOLFIRI and potential efficacy biomarkers in patients with metastatic colorectal cancer: the POLAF trial. Élez E, Gómez-España MA, Grávalos C, García-Alfonso P, Ortiz-Morales MJ, Losa F, Díaz IA, Graña B, Toledano-Fonseca M, Valladares-Ayerbes M, Polo E, Salgado M, Martínez de Castro E, Safont MJ, Salud A, Ruiz-Casado A, Tabernero J, Riesco MDC, Rodriguez-Ariza A, Aranda E. *Br J Cancer*. 2022 Apr;126(6):874-880. doi: 10.1038/s41416-021-01638-w. Epub 2021 Dec 22. PMID: 34937947; PMCID: PMC8927487 (GC06)
- Dysregulation of splicing variants and spliceosome components in breast cancer. Gahete MD, Herman-Sánchez N, Fuentes-Fayos AC, Lopez-Canovas JL, Luque RM. *Endocr Relat Cancer*. 2022 Aug 1;29(9):R123-R142. doi: 10.1530/ERC-22-0019. PMID: 35728261 (GC27)
- T1 bladder carcinoma with variant histology: pathological features and clinical significance. Lopez-Beltran A, Blanca A, Cimadamore A, Montironi R, Luque RJ, Volavšek M, Cheng L. *Virchows Arch*. 2022 May;480(5):989-998. doi: 10.1007/s00428-021-03264-6. Epub 2022 Feb 4. PMID: 35122124; PMCID: PMC9033727 (GE05)

COURSES AND WORKSHOPS

- Specific training for research groups in experimental design, technical applications and data analysis related to Unit equipment:
 - Training in data analysis using R-based software, NSolver: Groups GC01, GC06 and GC24
 - Training in the Nanostring custom panel design tool, nDesign: Groups GC06 and GE05
 - Training in ddPCR data analysis using QuantaSoft analysis software: Groups GC06 and GE09
 - Training in NGS data analysis using BaseSpace Sequence Hub: Groups GC06 and GC24
 - Training in qPCR data analysis using LC96, 7900HT and Biomark HD analysis software: Groups GC03, GC04, GC05, GC07, GC08, GC11, GC13, GC16, GC22, GC27, GC29, GE06 and GE09
- Three application workshops were held in the area of “Advanced Genomics: techniques and applications”: “Demo *single-cell* system-Dolomite Bio Nadia”, “qPCR applications-Taqman Array Cards” and “Next Generation Cytogenomics: Optical Genome Mapping (OGM) for the detection of SVs in complex human genomes”.

BRIEF DESCRIPTION

The IMIBIC Clinical Research Unit is responsible for promoting clinical research at IMIBIC and at the Reina Sofia University Hospital as well as establishing collaborations with other research centres.

The Unit focuses on clinical trial development including design, feasibility, regulatory affairs, launch, management, monitoring, pharmacovigilance, data management, statistics and delivery of clinical assistance. All operations are GCP compliant.

The IMIBIC Clinical Research Unit consists of two facilities: The Provincial Hospital Clinical Research Unit and the General Hospital Clinical Research Unit. Both are adapted to perform phase I-IV clinical trials on patients.

The Unit's Clinical Research Plan is included in the 2021-2025 Strategic Plan and contains a set of indicators to enable quantitative monitoring, which are monitored and reported by the Clinical Research Committee, which meets every six months.

Finally, it is highlighted that the IMIBIC Clinical Research Unit is part of the SCREN Platform (**Spanish Clinical Research Network ISCIII**).

EQUIPMENT AND FACILITIES

- 10 doctor's consulting rooms and a storeroom
- 2 hospital wards, each containing: an emergency trolley with semi-automatic defibrillator and emergency medication, intravenous fluids, an insulin pump, healing trolleys, oxygen outlets in all positions and an audio-visual system
- 14 armchairs and rooms with 3 single beds, all with ongoing monitoring
- Paediatric area
- 12-lead ECGs
- Measuring boards and scales
- Blood pressure monitor in each office
- Customised bathrooms
- Individual lockers for patients
- 2 living rooms for patients
- 2 waiting rooms for patients and family
- 1 multi-purpose room
- 2 laboratories for sample processing and centrifuges
- Freezers (-80°C and -20°C)
- 2 storerooms for materials
- High-definition ultrasound scanner
- 2 offices for study coordinators
- 2 offices for the CRA
- 1 meeting room
- 1 training room
- 5 archives

MAIN SERVICES

- Methodological support
- Launch and regulatory affairs
- Study development
- Monitoring
- Pharmacovigilance
- Delivery of clinical assistance
- Feasibility and start-up support processes for pharmaceutical companies, contract research organisations (CROs), and Investigators

KEY FACTS

- NUMBER OF NEW PHASE I AND II CLINICAL TRIALS: **38**
- NUMBER OF NEW INDEPENDENT CLINICAL STUDIES (CLINICAL TRIALS, OBSERVATIONAL STUDIES AND CLINICAL INVESTIGATIONS WITH MEDICAL DEVICES) PROMOTED BY IMIBIC INVESTIGATORS: **7**
- NUMBER OF CLINICAL TRIALS (MANAGEMENT AND/OR MONITORING BY CLINICAL RESEARCH UNIT): **30**
- ANNUAL INVOICING FOR CLINICAL STUDIES (CLINICAL TRIALS, OBSERVATIONAL STUDIES AND CLINICAL RESEARCH WITH MEDICAL DEVICES) PROMOTED BY THE PHARMACEUTICAL INDUSTRY, AND TOTAL VALUE OF FINANCIAL REPORTS SIGNED DURING THE YEAR: **4.263 m€ (invoicing) and 7.427 m (total value of financial reports signed)**
- PHARMA OR CRO CLINICAL TRIAL PROPOSALS RECEIVED BY CLINICAL RESEARCH UNIT FORWARDED TO INVESTIGATORS: **175**

12.7. BIOBANK UNIT

STAFF

Rosa M^a Ortega Salas, PhD
Scientific Manager

José Carlos Cáceres (July-December)
Alba Aguilera García (January-May)
Fernando López López
Technicians

BRIEF DESCRIPTION

IMIBIC is part of the ISCIII Biobanks and Biomodels Platform, an initiative of the Carlos III Health Institute. The Biobank Unit is a research support platform whose main role is to serve as a link between doctors, researchers and patients donating biological samples for biomedical research purposes, ensuring compliance with all the legal and ethical guarantees in force. The IMIBIC Biobank is part of the Andalusian Public Health System Biobank (SSPA), an initiative of the Department of Equality, Health and Social Policy of the Regional Government of Andalusia. It is a member of the thematic network of Hospital Biobanks belonging to the Carlos III Institute of Health (ISCIII), and a subprogram of Thematic Networks for Cooperative Research in Health (RETICS).

EQUIPMENT AND FACILITIES

The Unit has its own laboratory resources for sample processing (safety booths, PCR cabinet, cryostat microtome, floating bath, centrifuge, histology water bath, automated tissue processor for paraffin embedding, paraffin wax dispenser, etc.) and other equipment such as:

- TissueSAFE: fully automated preparation of tissue samples under vacuum.
- Tissue Arrayer: assembles different tissue samples in a single 3D matrix for subsequent histological analysis.
- QIAcube: Automated compact system for analysis of DNA, RNA, plasmids and proteins from different samples.

For sample storage, there are currently three types of freezer: one for temperatures of 4°C, two for temperatures of -20°C, and seven for -80°C. There is also a room to store paraffin blocks at room temperature.

MAIN SERVICES

The service portfolio is divided into four main areas:

- Custody: storage of samples at different temperatures.
- Processing: transformation of multiple types of biological sample according to the procedures and technical criteria generally used by researchers in their projects.
- Provision of human samples and data on human health and disease research, selected according to the specific clinical and diagnostic criteria of researchers.
- Technical, scientific and ethical consultancy concerning the collection, storage, and management of human samples in biomedical research.

In 2021, the quality management system of the Cordoba Biobank node of the Andalusian Public Health System (SSPA) Biobank system was certified according to ISO 9001:2015, the international standard regulating quality management systems. The scope of the quality management system implemented in the provincial nodes of the Biobank covers the provision, custody and processing of blood products or derivatives, tissues, substances or biological samples of human origin, and human embryonic and adult stem cell lines for use in research and teaching. The certificate was renewed in 2022.

Grant for Units of ISCIII Platforms supporting R&D+i in Biomedicine and Health Sciences, Strategic Health Action 2017-2020. File code PT20/00079.

COURSES AND WORKSHOPS

- Workshop "Aspectos éticos y legales en la gestión y utilización de muestras biológicas humanas en proyectos de investigación" [Ethical and legal aspects in the management and use of human biological samples], 1-2 February, 2022.

ISCIII PLATFORM BIOBANKS AND BIOMODELS

IMIBIC currently belongs to the ISCIII Biobanks and Biomodels Platform, supporting R & D+ i in Biomedicine and Health Sciences, Strategic Health Action 2017-2020. File code PT20/00079.

The ISCIII Biobanks and Biomodels Platform is an initiative of the Carlos III Health Institute.

The Coordination team has organised the Platform's structure into four scientific-technological HUBS: Biobanks, Organoids, Animal Models and 3D Printing. This structure facilitates the management and provision of biological samples and associated clinical data. In order to promote and expand scientific-technological resources in biomedical research, ISCIII-BB services include organoids, animal models and 3D printing. (<https://www.isciiiobiobanksbiomodels.es/en/>).

The ISCIII Biobanks and Biomodels Platform has joined the European Biobanking Infrastructure (BBMRI-ERIC) as an observing member, acting as the national node in BBMRI-ERIC, one of the leading research platforms in the European Union.

The objective of the BIOBANK HUB is to improve the competitiveness of Spanish biomedical and health research by providing researchers with centralized access to collections and data associated with the samples.

ORGANOID HUB offers the highest quality cutting-edge services in the guidance, validation and production of organoids from adult stem cells and pluripotent stem cells.

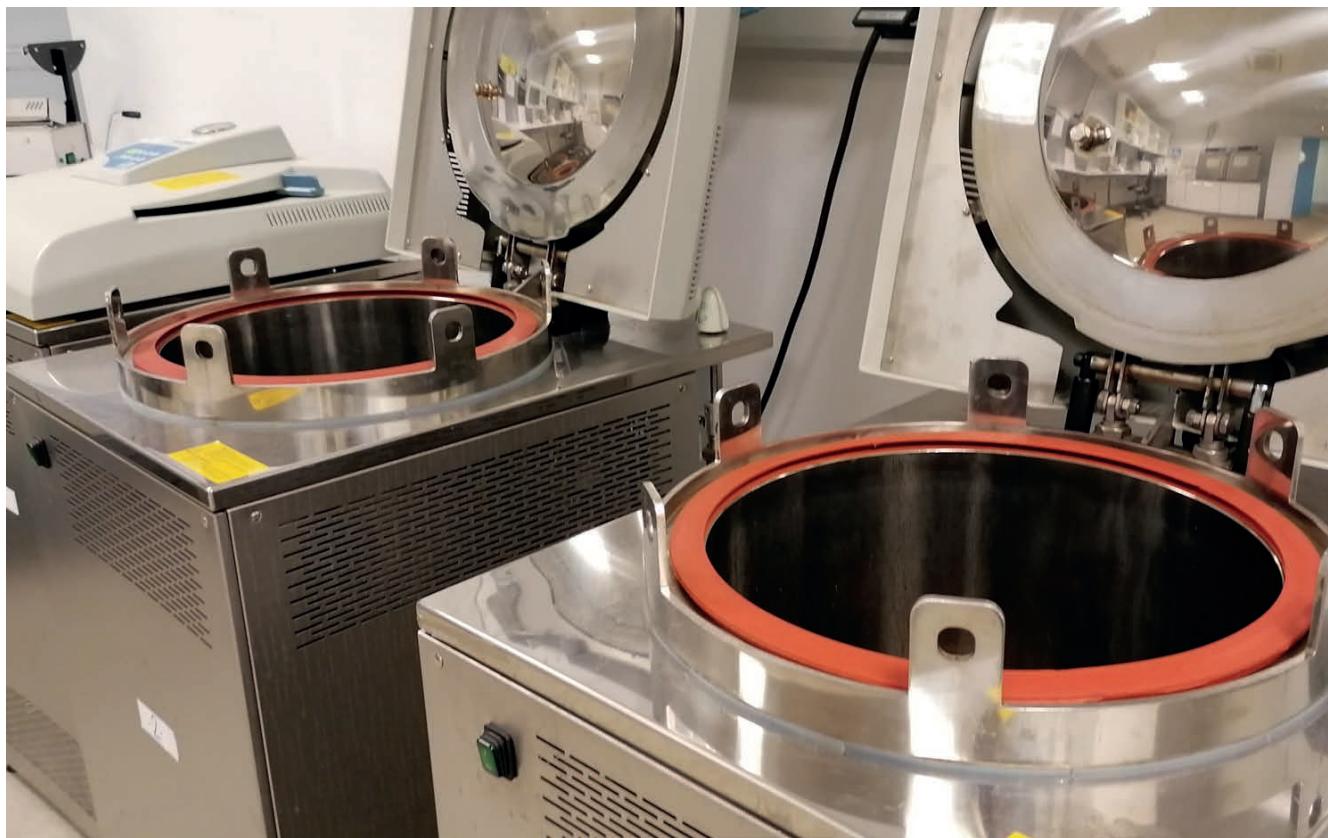

The ANIMAL MODEL HUB offers the highest quality cutting-edge services and guidance for the development and execution of animal experimentation models covering a wide range of species, as well as numerous experimental techniques.

The 3D (BIO)PRINTING HUB offer the highest quality consultancy in the delivery of cutting-edge 3D bioprinting and printing services, as well as numerous experimental techniques.

12.8 GENERAL PROCEDURES UNIT

STAFF

Esther Rivero Cortés,
Laboratory Manager-

BRIEF DESCRIPTION

The IMIBIC General Procedures Support Unit provides laboratory management services that are essential for the smooth overall organization of the Maimonides Biomedical Research Institute of Córdoba. These include providing technical support, organizing and supervising the technical, research and administrative activities of the research laboratories. More specifically, the Unit is responsible for the facilities, rooms and scientific equipment used by researchers for common and independent purposes in order to ensure the optimal and uninterrupted operation of laboratory experimental procedures, that quality standards and good laboratory practice are maintained, and to ensure the correct use and sustainability of specialized scientific equipment.

EQUIPMENT AND FACILITIES

- Centrifuge Room
 - Beckman Optima XPN100 ultracentrifuge
 - Beckman Optima L90K ultracentrifuge
 - Beckman Avanti J-26XP centrifuge
 - Kubota 2800 refrigerated centrifuge
 - Eppendorf 5810-R refrigerated centrifuge
 - Eppendorf 5424 centrifuge
 - Nanodrop Thermo ND 1000
 - Stratagene MX3005P qRT-PCR system
 - VC50 sonicator
 - Other auxiliary equipment
- Multiple equipment Room
 - Merck Millipore Advantage A10 water purification system
 - MilliQ Merck Millipore Q-POD ultrapure water dispenser
 - Bioplex Biorad Pro II

- Laminar flow hood for working with bacteria
- Comecta S-100D Orbital Shaking Incubator
- Other auxiliary equipment
- Sterilization Room
 - Selecta Presoclave-II autoclave
 - Selecta Presoclave-II autoclave
 - Selecta Presoclave-II autoclave
 - Memmert UN110 oven
 - Memmert UN110 oven
 - Ultra turrax Selecta Omni GLH 02 homogenizer / disperser
 - Ultra turrax Selecta Omni GLH 02 homogenizer disperser
 - Crison pHmeter GLP 21
 - Denver Instrument TP-214 precision balance
 - Selecta ultrasons water bath sonicator
 - Omni Sonic RUPTOR 400 sonicator
 - MilliQ Merck Millipore Q-POD ultrapure water dispenser
 - Other auxiliary equipment
- Histology Laboratory
 - Leica CM 1860 UV cryostat
 - Leica ST4020 automatic stainer
 - Leica TP1020 automatic tissue processor
 - Leica Arcadia H and C heated paraffin embedding station
 - Leica ST 5010 autostainer XL
 - Leica DM 2000LED microscope
 - Bio-Rad Universal Hood II for Bio-Rad's Molecular Imager Gel Doc and ChemiDoc Systems
 - Memmert UN110 oven
 - Other auxiliary equipment
- Temporary freezer storage
 - Deep freezer (-80°C) Thermo Scientific UFX60086V
 - Deep freezer (-80°C) Eppendorf Cryocube F570-86
 - Deep freezer (-80°C) Thermo Scientific UXF60086V
 - Deep freezer (-80°C) Thermo Scientific UXF60086V
 - Deep freezer (-80°C) Effimed UFV-800

MAIN SERVICES

- Management, technical support, and supervision of the correct use of scientific equipment in IMIBIC rooms and facilities, as well as of common auxiliary equipment belonging to IMIBIC (fume cupboards, autoclaves, centrifuges, etc.).
- Implementation and promotion of Good Laboratory Practices at IMIBIC.
- Management of usage logs and booking system for scientific equipment.
- Care and maintenance of laboratory equipment shared by IMIBIC groups.
- Drafting of documentation (technical instructions, protocols, reports, standard operating procedures, equipment lists, etc.) for documentary records.
- Autoclave treatment of research group materials in the sterilization room.
- Supervise the proper management and disposal of laboratory waste in compliance with the regulations. Coordinate with the External Prevention Service in cases of doubt or suggestions. Provide training support for laboratory waste management.
- Implementation and monitoring of the Trebol Program of Good Environmental Practice at IMIBIC, in compliance with the University of Córdoba.
- Cold storage management to ensure the proper use of available space in the event of failure of freezers belonging to the various research groups.
- Mentoring and training of new laboratory technicians.
- Provision of any other support and management of general procedures that may arise.

KEY FACTS

NUMBER OF IMIBIC USERS: All technical and research staff at the centre

NUMBER OF PUBLICATIONS:

NUMBER OF ONGOING PROJECTS: 2

COURSES AND TRAINING SESSIONS: 2

NUMBER OF MEETINGS WITH IMIBIC GROUPS: 1

- Ibáñez-Costa A, Blázquez-Encinas R, Alors-Pérez E, Fuentes-Fayos AC, **Rivero-Cortés E**, Herrera-Martínez AD, Gálvez-Moreno MA, Barlier A, Robledo M, Luque RM, Castaño JP. Molecular and functional study of somatostatin receptors in pheochromocytomas and paragangliomas. The virtual 18th Annual ENETS Conference 2021

PROJECTS

1. PI-0038-2019. CONSEJERÍA DE SALUD Y FAMILIAS. Clinical-molecular evolution after bariatric surgery, reversion, metabolic comorbidities, diabetes, hepatic steatosis, splicing, miRNA, inflammosome. Aura Dulcinea Herrera Martínez (GC08)
2. PI-0152-2019. CONSEJERÍA DE SALUD Y FAMILIAS. Therapeutic role of bioactive compounds in extra virgin olive oil in the pathological association of prostate cancer and obesity. Antonio León González (GC27)

COURSES AND WORKSHOPS

1. Laboratory Waste Management Training at IMIBIC
2. IMIBIC Trébol Programme Workshop

12.9 TECHNOLOGICAL INNOVATION UNIT

STAFF

David Requena Polonio

Innovation and Technology Transfer Coordinator

Miguel de Alba Aparicio

Software engineering technician

Ignacio Isla Cros

Software technician

Ana Lara Jiménez

Industrial design engineering technician

BRIEF DESCRIPTION

Technological Innovation. One of our basic functions is to apply the new information and communication technologies in the different research groups so that they can be used for projects according to need, without the research team having to spend extra time learning them. Advisory and consulting services are available to provide the most appropriate technological solutions.

Our main objective is to design and develop scientific-technological and industrial projects for research and clinical staff, as well as medical device prototypes.

Our laboratory is well equipped for the design and construction of 3D design prototypes, with 3D printing, electronic systems and development of software solutions. This is a huge advantage when it comes to innovation development and technology transfer related to rapid prototyping of systems in the medical field.

EQUIPMENT AND FACILITIES

- FDM 3D printers (2 units): Ultimaker S5 equipped with Air Manager S5 and Material Station.
- SLA 3D printers (2 units): Formlabs Form 3 and Form 3B+ with Form Wash, Form Finish Kit, Resin Tank and Build Platform.
- 3D design software: Solidworks 2022
- CNC machine with protective cover: Stepcraft 840
- Testing stations for electronic devices and PCBs.
- Hanmatek SD1 and Proskit welding posts
- Oscilloscope: Hantek Dso5202p, 2 channels, 200Mhz, 1GSa / s.
- Laboratory power supply (2 units): Velleman LABPS23023. Power supply: RPS 24V 5th
- Digital multimeter: Lomvum T28B
- Apple Mac Mini for iOS app development
- monoFab SRM-20 desktop milling machine
- LS900 laser cutting machine with camera
- Interactive table: Tactable TSP-55
- 3D holographic display: HoloFan 3DH Rd-100 PRO
- BYAKKO LD 3000 6090 CNC machine
- Einscan Pro HD 3D scanner with design pack
- 4WD Mecanum Robot kit
- Dremel 4000 tool kit
- Promax function generators
- Euromex binocular loupes
- Welding post with flexible arms

MAIN SERVICES

- 3D modeling and 3D printing with FDM and SLA technology.
- Design and manufacturing of devices, electronic and electromechanical equipment in general.
- Electronic circuit prototyping (with FPGA, microcontrollers, DSP, AO, etc.)
- PCB schematics and design, PCB circuit assembly with different substrates (maximum size 229x305mm).
- Infrared and hot air soldering / desoldering (BGA), SMD component mounting and through-hole technology
- Low-level programming: microcontrollers, FPGA reconfigurable hardware devices, etc.
- Software development
- Design and implementation of algorithms
- Database construction and instrument data capture
- Engineering and consulting

KEY FACTS

NUMBER OF IMIBIC USERS: **40**

NUMBER OF EXTERNAL USERS: **123**

NUMBER OF ONGOING PROJECTS: **6**

COURSES AND TRAINING SESSIONS: **5**

PRIZES OR GRANTED RECEIVED: **1**

REGISTERED PATENTS: 1 (patent with a participating team member) PCT U202131930 Anti-sores device.

NUMBER OF MEETINGS WITH IMIBIC GROUPS: **18**

NUMBER OF MEETINGS WITH EXTERNAL GROUPS: **15**

PARTICIPATION IN INTERLABORATORY COMPARISON STUDIES

PROJECTS

1. AYUDAS A LA I+D+I, EN EL ÁMBITO DEL PLAN ANDALUZ DE INVESTIGACIÓN, DESARROLLO E INNOVACIÓN (PAIDI 2020)/ Creación y Desarrollo de la Unidad de Ingeniería Biomédica e Innovación Tecnológica de Córdoba (CIBiT) asociada al Instituto Maimónides de Investigación Biomédica de Córdoba (IMIBIC)/ GRANTS FOR R + D + I, WITHIN THE SCOPE OF THE ANDALUSIAN RESEARCH PLAN / Creation and development of the Cordoba Biomedical Engineering and Technological Innovation Unit (CIBiT) linked to the Maimonides Institute for Biomedical Investigation of Córdoba (IMIBIC) /Miguel González Andrades
2. Radiology app. Development of an app for tele-training in radiological medical imaging/ Marina Álvarez/ UGC Radiología.
3. Website and app for testing children to check that growth is in line with biological age (DAUCO).
4. Website to calculate gender equity model for liver allocation (GEMA)/Manuel Rodríguez Perálvarez/UGC Digestive.
5. Bibliography search tool EACO/Juan Ruano/UGC Dermatología
6. Grants for a Hackathon (ESAL 2022)/ Grants call aimed at non-profit organizations for the development of guidelines that promote the socioeconomic development of a municipality in 2022.
7. Management tool for the mental health unit (HURS) GLADIS/Fernando Sarramea/UGC Mental health.

COURSES AND WORKSHOPS

1. Training: How to use the recently acquired CNC Machine BYAKKO LD 3000 6090
2. Webinar: 3D Bioprinting applied to regenerative medicine
3. Course: Industrial and Intellectual Property: What protection is available when entering the marketplace?
4. Course: Adding intellectual property rights to a project
5. Course: Docker for developers.

COMMUNICATION & RRI

SOME INTERESTING FACTS

- Number of events: **102**
- Number of news items in mass media: **>500**
- Number of website visits: **70,779**
- Number of visits to IMIBIC:
 - Institutional: **6**
 - Educational: **49**
- Number of people visiting IMIBIC: **1,656**
- Interaction data on social media: **>1,000,000**

IMIBIC - RRI ACTIONS IN 2022

Scientific dissemination activities aimed at secondary school students: most of these scientific dissemination activities, adapted to the age/level of the participating students, the characteristics of the school and type of activity, were of the following types:

- **-School Visits Programme 2022.** These visits are aimed, for the most part, at upper level secondary school students (Bachillerato and ESO). During 2022, IMIBIC hosted 15 visits as part of this programme, with a total of 232 students and 23 teachers. Various educational centres from our city took part in these visits, among them: CES Lope de Vega, IES Blas Infante, Colegio Fundación Zalima, IES Fidiana and IES Villarrubia.
- **Presentation of IMIBIC as part of the School Visits Programme of the University Hospital Reina Sofía de Córdoba (HURS).** We have been involved in this activity for 11 consecutive years. The Institute participated in 13 organised visits, which were attended by 624 high school students and 26 teachers from various schools in Córdoba and the province.

Scientific dissemination activities for other social groups: The activities in this section, adapted to the characteristics, age and interests of the participating social groups, included:

- **Programme of visits to IMIBIC for students of Higher Level Training Cycles. (CFGs):** These visits are mainly aimed at students in the higher level training cycles of the Health family. In 2022, IMIBIC hosted 3 visits as part of this programme, with a total of 43 students and 5 teachers. Several educational centres in our city took part in these visits, such as CES Ramón y Cajal, IES Antonio M^a Calero and IES Fuensanta.
- **Programme of visits to IMIBIC for students from the University of Cordoba:** These visits are aimed at students from the Advanced Polytechnic School of Córdoba and the Faculty of Education Sciences and Psychology of the University of Cordoba. During 2022, IMIBIC hosted 6 visits as part of this programme, with a total of 94 students and 7 lecturers.

Projects and events related to Responsible Research and Innovation (RRI) carried out or held during 2022 included, among others:

The E-ducass project: this project was funded by the ISCIII as part of the Strategic Action in Health. The project is aligned with health literacy and focuses on novel solutions for vulnerable populations with health inequalities.

European Researchers Night: This year's event was aimed at 70 students from various schools in Córdoba (CES Lope de Vega, IES Fidiana, the British School of Córdoba and IES Medina Azahara). Students enjoyed a discussion between researchers on health research and the different professional research profiles, and visited the IMIBIC facilities.

II Family Research Day: The aim of this IMIBIC activity is to raise awareness among children of the importance and value of research and innovation in health, with the involvement of their fathers, mothers, aunts and uncles, and/or grandparents in this endeavour. We welcomed 140 children to this event and held a number of research workshops for different age groups.

IMIBIC Challenge: This initiative consisted of participants running, walking or swimming 85,000 kms in order to promote healthy habits, give visibility to biomedical research and encourage philanthropy in research.

Within the framework of the RRI actions, also worth highlighting are the participation of key non-scientific actors in some of the internal committees, including the Equality, Training, Innovation and Clinical Research Committees, as well as the grants for Open Access publications as part of IMIBIC's Own Plan (*Plan Propio*).

**SCIENTIFIC REPORT
IMIBIC 2022**

GOALS FOR 2023

THE INSTITUTIONAL GOALS FOR THE YEAR 2023, APPROVED BY THE GOVERNING COUNCIL OF THE INSTITUTE, ARE AS FOLLOWS

To encourage and support research groups in applications for projects and calls for Human Resources, Network and International Funding Projects, and to propose different institutional support measures.

To encourage generational replacement and the search for young talent in different areas of Primary Care.

To take advantage of the capabilities of the Technological Innovation Unit and the Bioincubator as means of helping create an ecosystem for idea generation, business development and industrialisation of our environment.

To ensure compliance with the objectives associated with the incorporation of new researchers/staff through the Investigo Program in order to further their training and the development of new research careers.
